SCALE DRAWING.—Figs. 1 to 4 show freehand sketch work, dimensioned for scale drawing. Such sketches need not be in accurate proportion, but the arrowheads for their dimensions must indicate clearly the spaces or distances to which each dimension belongs.

Scale drawings are not to be made from the above sketches. Select a simple object and make a freehand dimensioned sketch of it, then from this sketch draw the object to scale on one of the blank pages 18-21.

Figs. 5 to 7 show how a scale drawing of the workbox or other simple object is commenced and finished.
