

OBUISE OF THE NANCY LEE

ANOTHER LETTER FROM OUR MANTOUL CORRESPONDENT.

DESCRIPTION OF THE NANCY LEE. The Craft Comes to Get on the Lake—An Exciting Race.

Base Lake, April 18, 1886. Editor World: The woods are full of birds and flowers, the waters, ransomed from the grip of winter, are dancing merrily in the sunbeams away to the great lakes and the distant sea, and the two rangers on Base Lake, perhaps of the general history. The drachma is silver, silvered on our lake was launched yesterday morning. She is 18 feet long, 8 feet wide and draws six inches of water, seventy-five of flattened logs securely pinned together by cross pieces of plank. She is sailing as fast as a windmill, by called, the "Nancy Lee." After the launch Jack and I went fishing. The Nancy Lee is propelled by two poles about 14 feet long. After having her out into about 10 feet of water, we baited our hooks with pieces of squirrel, which we had shot for the purpose, and dropped our lines over the side. Now, as Secretary of the C. B. C. I wish to be very cautious, when I tell a fish story, therefore I shall only say that I got more fish and more fish than any other angler that I have had in a whole summer's fishing in Ashbridge's Bay. Fine rock bass and pickerel as big as well as consideration, I shall not fish that season. When the fish came up, I had a basket of three trout, silvered and golden. In fact that is an excellent motto in all matters piscatorial, so I shall not do it now.

While we had been enjoying our sport the Nancy Lee had drifted out into the lake, where our poles could not touch bottom, so that when we wished to return to shore, we could not. We tried to paddle her back with the poles, but we failed. We set sail from "The Cedar" about 9 a.m., and we tied up on the opposite side of Base Lake about three o'clock, a mile distant about 2 p.m. As a race our craft is not a shining success, but then she can stand any sea. The Nancy Lee has a sail of I have a fine stock of eggs for Easter. They are sea-gulls' eggs, and taste exactly like ducks' eggs. I gathered them a few days ago on the Gull Islands near the south shore of Manitowish, from which they are separated by a narrow channel. They are four in number and the largest has not more than a half size of a duck's egg. The surface is smooth and coarse beak, among which the gulls nests are so crowded in places that you have to step carefully in order to avoid crushing the eggs. The nestlings in the vicinity gather the eggs from about April 10 to the middle of May, taking care to leave one egg to the nest, for the gull, like the common hen, will lay for some time before sitting. If a nest egg be given to a child, it will hatch. The warm weather has brought forth, gulls and ravens, out of the winter quarters. Fred Beeson has a fine litter of seven spring pigs, about six weeks old. Two of these disappeared on two successive nights, and it is the belief of the neighbors that the culprit was a fox. The fox was plainly visible leading from the house across a piece of plowed land to a gap in the log and brush fence, which was cleared, Fred summoned assistance to destroy the murderer. Six of his neighbors, besides Jack and me, gathered out with our rifles to kill that thief. The clearance is almost square, about seven acres in extent, and the house is at the center. The gap, through which the fox had come for his dinner, was on the west side, about 25 yards from the fence on the west side. We took up our rifles and went some bush inside the fence on the south side, where we had a good view of the gap. The first night we watched until midnight, but got no chance of a shot. The second night we were inactive. All talking and smoking was prohibited. We sat with our rifles against big trees, which formed the foundation of the fence behind us, calmly and doubtfully awaiting the entrance of the thief. The moon was up and we could see the opening through our screen of brush almost as well as if it had been day. All of us distinctly heard the snapping of a twig near the gap. Every man with his rifle at his shoulder pointed at the spot where we were sure the bear would enter the clearance. Not a whisper was heard. Every eye was aimed at the gap. Suddenly there was the crack of a rifle snapping on the top of the fence behind us, a fearful yell of "murder!" from the top of the house, as the bear leaped behind us almost as he rushed back to our ambulance, but the bear was gone, no doubt as badly frightened as ourselves. He must have detected our screen of brush, when he came to the gap, and came round to re-occupy it. The breaking of the top rail precipitated him into our midst. Mr. Editor, is a true history of my first bear hunt.

One Dollar Against Five Hundred. —Janet Brown, who was afflicted with chronic humors in her blood. She says one dollar bottle of Boreed's Blood Purifier was worth more than \$500.00 paid for other medicine. It is a reliable blood purifier. It is a reliable blood purifier.

The Funeral of a Bark. —From the London Truth. It is a long time since there has been more magnificent and solemn ceremony than the funeral of the Dowager Duchess of Norfolk. On the arrival of the coffin at Arundel last week it was conveyed from the station to the Roman Catholic Church with much state. The procession, with the coffin covered by a sumptuous pall of black and gold, the numerous priests in their vestments, the choristers in their surplices chanting funeral hymns, the organ, the quiet and splendid eulogies, the torches and the long train of mourners, made altogether such a picturesque sight as is not often seen in England, and it created a profound impression among the crowds who witnessed it. The church was wholly draped in black, which, according to the old custom, is to be distributed among the poor of the town; and there were four watches by the coffin, day and night, with numerous candles of immense size constantly burning. Yelpers for the dead were sung on the arrival of the coffin, and there was a requiem mass next day.

A Pleasant Story. —"I feel it my duty to say," writes John Horton, of Deser, F. O., "that Boreed's Blood Purifier cured my wife of her chronic skin, from which she had been a chronic sufferer. Her distressing, painful symptoms soon gave way, and I can recommend the medicine to all suffering as she did." 246

From the Connoisseur. —Lester Benson, the great temperance orator, lectured here to densely crowded houses Thursday and Friday nights. Never have we heard such an awful and terrific denunciation of the whiskey traffic and the evils of alcohol. It would take the most extravagant praise of every man, woman and child present to give the faintest idea of the great grandeur of the man's words—

FREE SHOW.

Seed Grain Given Away.

THE CANADIAN PACIFIC RAILWAY CO.'S CELEBRATED Exhibition Car, CONTAINING Samples of the Products and Soils OF MANITOBA AND THE CANADIAN NORTHWEST TERRITORIES. Will be on Exhibition at the Exhibition and 24 Hours before mentioned.

ALL OTHERS GUARANTEED FOR ONE YEAR. Call and examine our work before purchasing elsewhere. All orders promptly attended to. Special attention to repairing, turning and proofing worn lines.

WONDERFUL TELEGRAPH.

Edison's Discovery.

A sensational dispatch in the New York Sun says: "William L. Shreve, the young mechanic who, at the age of 18, invented the induction telegraph, with which Edison has lately created such a famous telegraphing from flying trains, was for a long time at work at his bench in one of the machine shops of the city. He deeply engaged in the domain of electricity and gave promise of a wonderful future. If he lives he will surely excel Edison as a wizard. This unknown boy invented the induction telegraph while working at the shop of his father, who was unable to transmit messages from one wire to another by the ordinary method, but being without means or acquaintance was unable to interrogate anyone in it. He thought that he could telegraph between wires that were strung on square rods forty feet apart was not credited to him. Shreve was soon forced to abandon his efforts to improve the induction telegraph. This he has heard of the induction telegraph while working at the shop of his father, who was unable to transmit messages from one wire to another by the ordinary method, but being without means or acquaintance was unable to interrogate anyone in it. He thought that he could telegraph between wires that were strung on square rods forty feet apart was not credited to him. Shreve was soon forced to abandon his efforts to improve the induction telegraph. This he has heard of the induction telegraph while working at the shop of his father, who was unable to transmit messages from one wire to another by the ordinary method, but being without means or acquaintance was unable to interrogate anyone in it. Shreve was soon forced to abandon his efforts to improve the induction telegraph. This he has heard of the induction telegraph while working at the shop of his father, who was unable to transmit messages from one wire to another by the ordinary method, but being without means or acquaintance was unable to interrogate anyone in it. He thought that he could telegraph between wires that were strung on square rods forty feet apart was not credited to him. Shreve was soon forced to abandon his efforts to improve the induction telegraph.
