

## ROPE TRANSMISSION OF POWER

The above cut shows our patent system of Rope Drive from Engine Wheel to Main Line Shaft. This system is now adopted in many of the leading steam power plants in Canada, and from all of them we have letters of highest praise. The experience in its use has proved

### THE ROPE DRIVE

TO BE THE MOST

### ECONOMICAL <sup>A</sup><sub>D</sub> POSITIVE

means of transmission of power yet tried.

Where the engine is placed at a distance from the Line Shaft, for insurance regulations, or where it is from necessity situate very close to Line Shaft, a Rope Drive is practically indispensable.

We invite all manufacturers who are contemplating a change in their power plant, to see us and investigate the desirability of adopting our system before closing plans.
