and Druggists generally

THIS APPLIANCE consists of ingeniously arranged metal cylinders in which water is heated by an automatically regulated safety alcohol lamp, forced out through the rubber coil and brought back again (without evaporation) to be re-heated, thus maintaining a continual heat of any desired temperature—either constant or gradually increasing—for as long a time as needed and requiring attention only once in 24 hours (when the alcohol lamp is refilled).

The Geyser Hot Appliance Is Peculiar to Itself

It is simple, compact, economical. It can be used at any time and any place where alcohol and water are available, and can be made ready for use in three minutes. In its neat hardwood case it weighs only three pounds and is easily carried where needed. Size of appliance: 3 inches in diameter, 9 inches high, rubber coils of suitable sizes and shapes.
