GOOD ROADS, THE SLOGAN.

Pickering Tp. After Years of Com mutation System, Dissatisfied.

Pickering this year, with the large causing the electors to look forward to a lively skirmish in January. A mo-tion was put thru at the last meeting of the council, to vote on the question of a return to the old statute labor sysof a return to the old statute labor system in January. This shows what way the wind is blowing, and the dissatisfaction at the present state of affairs seems to be general, not very many think that they should go back to the old system, but they claim it has superior claims to the present method. This year the county council systems change, and the fight for the reeveship promises to be an interesting one

DURHAM COUNTY ALIVE.

at the Fruit Growers' Association, there would be more profit made in apples and more pleasure gotten in their culture.

Durham raises good apples. They raise lots of them, and Mr. Rickard told the members all about them. Other townships surrounding Durham where many good winter apples go out, many feeling still existing among the plowmen of to-day, Riding and gang plows have well-nigh driven out the artistic work of the old men, who could plow a furrow that seemed painfully straight. And it is pleasant farm the program of the proper in the program of the province of British Columbia. This program of the province of British Columbia. MARKET FOR ONTARIO APPLES.

in this issue. His apple survey is mas. Continuation of Inspector McNell's Paper Read Before the Convention of the Ontario Fruit Growers' Association Last Week.

(Continued from last Friday's World).

Just here may be a convenient place to discuss the question of markets for early apples. The two most important markets for early apples are the western provinces and Greatt Britain. The markets of the western provinces and Greatt Britain.

If markets of the western provinces are opening so rapidly that few who have to not paid special attention to this matter will realize and appreciate the extraordinary growth of late years. The influx is not likely to lessen for many years, but the market for apples cannot be measured by this standard, alarge as it will be. The great cost of distributing the apples limits the consumption very largely to the cities and towns capable of taking at least carload lots. During the last few years there have been established along the railway lines of the western provinces, hundreds of stationary none of which, until recently, were able to take he fruit in carload lots. Last year aid this some dozens of these places have come into the market accepting carload lots. A few years ago Winnipeg was the only distributing the places have come into the market of or provinces, hundreds of stationary the provinces, hundreds of stationary the provinces, hundreds of stationary the provinces have been established at all the provinces have been established at the province of this an extraordinary demand for fruit has sprung up, warehouses have been established at Regina. Prince Albert, Mossejaw, Calgary, Letibridge and Edmonton. In consequence of this an extraordinary demand for fruit has sprung up, warehouses have been established at the downward of the same than the consequence of the same than the consequence of the province with the price which is received by the grower to enjoy fruit, which necessarily is high-priced even yet compared with the price which is received by the grower to enjoy fruit, which necessarily is high-priced even yet compared with the province of British Countries of the same to the grower to the confidency to a market that the ontario of all the fruit that Ontario and w

styled district No: 3, owe their high reputation as an apple region, partly to the climate, partly to the geological formation, and partly to the shrewdness of the orchardists in learning lessons from the experience of the older orchardists in the west. Geologically, the best apple orchards in this district are in what is known as the Iroquois Basin, extending to the high land at varying distances from the present shore of Lake Ontario. This land is extremely fertile, and has the climatic advantages of the lower situation protected by the high ground to the north. Many very excellent orchards, however, are grown on the

the north. Many very excellent orchards, however, are grown on the
high land just beyond this basin till
it merges into district 4, where only
the hardiest trees will grow. Large
orchards are the rule in district 3. The
varieties have been well selected to
meet the requirements of a winter
trade. Orcharding is a specialty with
many growers, and the enterprise is
considered extremely profitable. This
district is well adapted to the usual
methods of the apple operators. Owing to the larger orchards, and the
fewer varieties, the cost of picking and
packing is much smaller than in district No. 2. The recommendation here

improbable, become unprofitable in New York State, while the growers north of Lake Ontario could continue with a margin of twenty-five cents pe barrel, at least.
District No. 4 contains probably mucl

less than a million apple trees, many of these of unsuitable varieties. The area covered is extremely large, that, with the exception of a few small sections in this district, it cansmall sections in this district, it cannot be regarded seriously in the business. Nevertheless, there is no part of Canada where a larger return might be made than in this district. They grow to perfection here the Fameuse, the McIntosh Red and the Wealthy. In addition to these the Alexander and the Wolfe River can be grown quite profitably; they are much better apples and better keepers than when grown furthes south. Nevertheless, they are not of extraordinary quality. The Fameuse and the McIntosh Red stand at the head as dessert apples. If the excellence of these apples as a dessert fruit were recognized, and if the growers would but pack in boxes after the style of the Pacific Slope fruit, the business would be extremely profitable. There is a splendid opening for any packers who will take up the packing of these apples in this district, and cater to the very high class of customers—those who are willing and able to pay a large price for a most excellent article.

SOME GENERAL ADVICE.

To sum up the situation generally, I should recommend that district 1, or the counties along Lake Erie, should devote themselves very largely to early

duce box-packing, fruit growing would become one of the leading industries. Sorry to learn of this dispersion, become one of the leading industries.
