

OUR NEW FACTORY.

On the front cover of this book we give to our readers a birds-eye-view of our new factory building, which we have just had erected in Montreal for our especial use. We cannot enter into a description of it in the limited space at our disposal here, further than to give a general idea of its size and uses. In extent it covers three sides of a square having a total frontage on three streets of 404 feet, with an inner court in which is built the engine and boiler house. It is four storeys high with the basement, and is built entirely of brick and stone, the St. Antoine Street front being handsomely faced with sandstone. For substantial structure and architectural beauty it is not excelled by any factory building in Montreal. Every modern improvement that would facilitate the business has been adapted, such as steam elevators, hand railways, machines for bottle washing, bottle filling, bottle corking, &c. Steam and gas are carried to all parts of the building.

Commencing at the top floor, which is set apart entirely for laboratory purposes, it is here where are manufactured those world-renowned preparations, some of which are described in this book, and which are so well and favorably known to the people of Canada.

Descending to the next floor we find the bottling department and store rooms for finished goods. Again descending we come to the finishing apartments, shipping department, sample rooms and offices.

The basement is used for the storage of cased goods, and as a bonded warehouse. It also contains the printing office.

As stated above, we cannot describe the new factory in the space here at our disposal, but feeling confident that we have a building not surpassed in convenience, size and elegance either in the United States or Canada for the purpose it is intended for, we invite all our friends to come and see us, when we will give them a hearty welcome.
