

Officially Inspected, Sealed and Passed as Kerosene Burners

These are the Official Cards given Avery Tractors at Fremont after being drained, filled, sealed and inspected under the direction of the Fuel Inspectors.

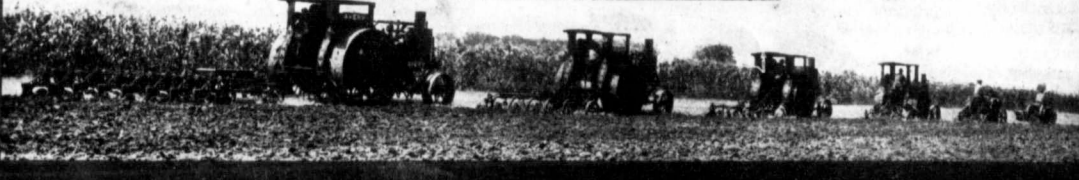

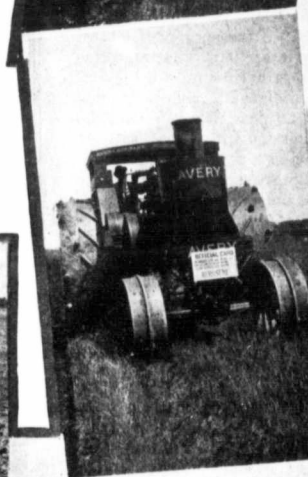

The rules were that a tractor which burned kerosene was allowed only 5 per cent as much gasoline as kerosene for starting. Avery Tractors not only burned kerosene but no more gasoline was taken by any Avery Tractor during the entire week than the amount allowed for the first day's filling of kerosene. And just to show that Avery Tractors would do even more, two sizes were run on distillate.

The secret of the wonderful success of Avery Tractors in burning kerosene is found in the Avery Gasifier and Double Carburetor Fuel System, which burns ALL the kerosene. You ought to know all about why Avery Tractors burn kerosene so well. Write for the complete Avery catalog and Get All the Facts.
