UNDERDRAINAGE

CONTINUED

The depth of drains and the distance apart are points which require to be carefully considered. The roots of ordinary crops penetrate three to four feet into the ground, and if not given an opportunity to do so before drought sets in, they are unable to make the depth afterwards. If tile are placed three feet deep in the ground the water table over the tile is lowered to the depth of three feet but it is found that in clay soil 25 feet from the tile the water table is only two feet below the surface and in loam soil it rises one foot in thirty-three. It is therefore apparent that drains should be deep enough to permit the greatest root development. A safe rule to work on is for clay tile placed three feet deep, drains should not be more than 50 to 66 feet apart, and in loam soil 66 to 100 feet apart. First hand knowledge of the texture of the soil and subsoil together with the experience of the farmer in studying general conditions will help to decide in each individual case.

Size of Drains:—Drains should be designed to relieve the land of surplus water during times of maximum rainfall or seasons of continued precipitation which overcharges the soil beyond its capacity. In providing for drainage adequate for agricultural lands under these varying conditions we consider that the volume of water which must be removed by drains regulated or limited by the reservoir capacity of the soil, the evaporation of water from the surface and by growing plants, also the length of time which the soil may remain saturated without injuring it or the plants growing on it. Definite rules and formulae are used for this purpose but sufficient tables for an accurate guide are always compiled in each treatise on Drainage, Bulletin No. 175 of the Ontario Department of Agriculture.

Determining grade of tile:—The least grade allowable is measured largely by the accuracy with which the construction work will be done. Tile drains will operate successfully and be permanent in clay or other firm soils if accurately laid on a grade of ½ an inch in 100 feet, but better to have at least one inch in 100 feet. If the soil is soft, full of fine silt or sand which will enter the drains, especially drains of smaller size, a greater velocity of flow will be required to free them from silt which enters. A careful arrangement of grades of drains is of great value and is one of the advantages to be derived from a survey.

(To be continued)

Mr. David Hayter, of Alvinston, Brooke Township, Winner of the \$100.00 prize in the Flax Competition

In order to improve flax growing in the Alvinston district and in Lambton County in general, Mr. T. A. C. Gordon, Manager of the Lambton Flax Company, generously donated Two Hundred dollars (\$200.00) to be given as prizes in a Field Crop Competition to improve flax growing in the Alvinston district, the fields to be judged by a Representative of the Department of Agriculture.

Mr. F. K. Jackson, Director of the Flax Experimental Station, England, was present during the second judging of the fields. Mr. Jackson spoke very encouragingly of the prospects of flax growing in Lambton County. He considered conditions very similar to the very best flax growing districts in Great Britain. He considered this season's crop compared very favorably with the best flax areas he had looked over this season. The quality of the fibre was the very best but he advised flax being pulled a little earlier, but owing to weather conditions and the labor problem this year, both in Great Britain and Canada, the very best that could be expected was being done.

The late, wet, backward spring was no doubt somewhat discouraging to the flax growers of the County. Suitable weather for planting was very irregular, consequently some very late flax was sown. The idea was to plant the flax in such a way that the fields for pulling would come in succession but the intense heat of the past month hastened the time for pulling. This again made greater demands upon our labor supply but on the whole the flax crop was harvested in very fair condition. Mechanical pullers are now being tested out in this County and are proving very successful. This new adventure will no doubt establish our flax industry on a new basis, for labor for pulling flax at the proper season has always been a drawback to the industry.

The fields in the Alvinston Field Crop Competition were judged and scored by Mr. G. C. Bramhill, Fibre Expert for the Dominion Government. The fields were judged once while the crop was standing and once after the crop was pulled and shocked. The following are the winners in the Alvinston Competition:—1st prize \$100.00—Mr. David Hayter,

Alvinston. (Mr. Hayter was also the winner of the Hanna trophy last year (1915) for the best four acres of corn in Lambton County.)

2nd prize \$50.00—Mr. W. J. Weed, Alvinston.

3rd prize \$30.00—Mr. W. Patterson, Alvinston.

4th prize \$20.00—Mr. Andrew Gray, Alvinston.

W. P. MACDONALD, B.S.A., District Representative.

AN ANXIOUS TIME FOR ALL PARENTS

Children Often Seem to Pine Away
And Ordinary Medicine Does
Not Help Them

The health of children between the ages of twelve and eighteen years, particularly in the case of girls, is a source of serious worry to nearly every mother. The growth and development takes so much of their strength that in many cases they actually seem to be going into a decline. The appetite is fickle, brightness gives way to depression, there are headaches, fits of dizziness, palpitation of the heart at the least exertion, and sometimes fainting. The blood has become thin and watery and the sufferer must have something that will bring the blood back to its normal condition. At this stage no other medicine can equal Dr. Williams' Pink Pills. Their whole mission is to make new, rich blood which reaches every part of the body, bringing back health, strength and energy. Miss Hejens Taylor, West Toronto, says:—"Two years ago I was so badly run down with an anemia that some of my friends did not believe I would get better. I could not go upstairs without stopping to rest, suffered from headaches, loss of appetite, and for two months of time was confined to the house. I was under the care of a doctor, but the medicine I took did not help me in the least. A friend advised my mother to give me Dr. Williams' Pink Pills, and although I did not expect they would help me after the doctor's medicine had failed, I thought they might be worth trying. After taking two boxes there was such a marked change for the better that people asked me if I had changed doctors, and I readily told them the medicine that was helping me. I continued taking the pills until I had used eight boxes, when my health was fully restored, and I have since enjoyed the best of health. I hope my experience may be the means of convincing some sickly person that Dr. Williams' Pink Pills can restore them to health."

You can get these pills through any medicine dealer or by mail, post paid, at 50 cents a box or six boxes for \$2.50 from The Dr. Williams Medicine Co., Brockville, Ont.
