Questions and Answers. Veterinary.

Enlarged Leg.

Drove 1,500-lb. mare 25 miles on Sunday. An hour after we arrived she went lame on hind leg. She passed no urine. Monday at noon I gave her oil of turpentine and oil of juniper. At 7 o'clock I passed a catheter and got matter. Next day I gave her a purgative, which acted all right. She is now back to her own stable, but the leg is still swollen. Is it wrong to give her whole oats now? J.A.B.

Ans.—We think you are mistaken in saying that matter escaped through the catheter, as in such a case recovery would not be so rapid. Was it not thick, yellowish urine, instead of pus? However, as she has recovered except for swelling of her leg, the bladder trouble, if there was any, has disappeared. Give her 1 dram iodide of potassium three times daily for a week. Hand-rub the leg frequently, and apply a woollen or knitted bandage, and leave on until prepared to hand-rub again. Continue the rubbing and bandaging until the swelling disappears. Do not feed oats of any kind. Feed bran instead until she is fit to go to work again. V.

Miscellaneous.

1. Cow sometimes cannot fetch her left hind leg forward. Sometimes she walks all right for a few steps, and then her leg appears to lock and she trails it for a few steps, then goes all right for a while, etc.

2. Colt was punctured about the hock on inside of leg. I treated it and it healed, but there is a lump about half the size of an egg. Can I remove this, and if not, will it be considered an unsoundness?

3. Is a draft mare with sidebones considered unsound when not lame? If so, how much would it reduce her value?

4. Mare has a sitfast on point of shoulder J. S.

Ans.—1. The stifle bone becomes dislocated. Keep her as quiet as possible in a comfortable, well-bedded box stall. Get a blister made of two drams each of biniodide of mercury and cantharides, mixed with two ounces of vaseline. Clip the hair off the front and inside of the joint. Tie her so that she cannot bite or lick the part. Rub well with the blister once daily for two days. On the third day apply sweet oil and turn her loose in the stall. Oil every day until the scale comes off, and then tie up and blister again. After this, unless better, blister once every four weeks. Some cases are incurable.

2. Rub well once daily with a liniment made of four drams each of iodine and iodide of potassium, and four ounces each of alcohol and glycerine. Have patience, and continue treatment for months if necessary. It is probable you will not be able to remove the lump entirely, and while it may not be considered an unsoundness, it will be an abnormality, and decrease his market value.

3. In all cases, sidebone is an unsoundness, and decreases value from 25 to 50 per cent.

4. Dissect the sitfast out, being careful to remove all the skin, and then dress three times daily with a five-per-cent. solution of carbolic acid in water. V.

Miscellaneous.

Plowing Down Clover—Weed Book.

1. When is the best time to plow down red clover, when it is in full bloom or just beginning to bloom?

2. Tell me where I could get a book on "The Weeds of Ontario," and the price of same?

Huron Co., Ont. SUBSCRIBER.

Ans.—1. Turned under when in full bloom would probably give most plant food to the soil.

2. Department of Agriculture, Toronto, issued a bulletin on "The Weeds of Ontario" which could be secured by writing for it. "Farm Weeds of Canada," published by the Department of Agriculture, Ottawa, is the most handsomely illustrated and complete work of its kind. May be secured from the Publications Division, at the nominal price of \$1.00.
