

John Deere Farm Implements

Standard Wherever Used

"R & V" Gasoline Engines

R. & V. Gasoline Engines are equipped with an extra ring over the piston pin. This is one of the desirable features found on all R. & V. "Triumph" Engines. Its value is well understood by all gasoline engine users, as it prevents scoring or ruining of cylinder. This, and other features make the "Triumph" the best gasoline engine for the farm.

The "Triumph" is the neatest, most compact, smoothest running and durable engine on the market. It is easy to start, and absolutely safe to operate in either house or barn as it meets with all requirements of the Fire Insurance Underwriters. It always develops the rated horsepower.

When you buy an engine, get one upon which you can depend. The engine that costs the least when purchased is by no means the most economical to run. The engine that lasts the longest, wastes no fuel, runs smoothly and with the least trouble is the cheapest in the long run. The R. & V. "Triumph" is just such an engine.

Other Features

The "Triumph" is made in sizes 1, 2, 4, 6, 8, 10 and 12 H. P., stationary and portable. Cylinder is detachable, making it easy and cheap to replace. Die cast babbit bearings are used on the "Triumph". Gasoline is in sub-base, making a neat, compact engine. Improved double fly ball governor permits of close speed regulation. Speed can be varied to 30 per cent, without stopping engine. Engine is hopper cooled and therefore does not require the tank, pipes and fittings used on engines with other styles of water cooling systems.

Ask your local John Deere dealer to show you the "Triumph" or write us for free attractive booklet "Letting Gasoline Do It" which shows how a gasoline engine will save you money.

John Deere Self Feed Pull Power Press

The press that can be set at the middle of the stack, the most convenient point to pitch to. It will successfully bale any kind of fibrous material that can be held together with two or three wires.

Rapid Work

More rapid work is possible with this press than others of its kind because it is a pull-power press. There is no high dangerous pitman for horses to step over. No heavy pitman to move back and forth means not only less work for the horses, but more rapid work. Pull-power delivers bales to the front out of the dust and dirt.

Self-feed increases capacity. Twelve to eighteen tons, or even more, can be turned out daily. The large feed opening and the compound leverage power being greater permit the use of a short sweep which gives plunger more strokes and increases its capacity.

John Deere Self Feed Pull Power Press

Neat Work

Neat, well-pressed bales bring the best price. The self-feed on this press carries hay well down into baling chamber, and the automatic folding tucker and powerful plunger insure neat, square-ended, well-pressed bales.

A Press That Lasts

Frame is practically all steel with its different parts riveted together. Baling chamber is large and made of three-inch steel angles. Sides are heavy steel and entire baling chamber is practically one solid mold of steel. Tying case is of sufficient height to allow person tying bales to stand up and easily reach over.

Your John Deere dealer will be glad to show you these implements.

John Deere Eastern Stag Sulky and Gang

Made with the fewest parts—no frame. Strongest plow of its type made. Weight properly distributed—no drag on bottom.

Steady running—wheels attached directly to beam by steel brackets.

Does excellent work in trashy ground—extra clearance under beam. Six inches more than ordinary plows of same type.

Stag gang and sulky are alike in essential features, except that the gang is adapted for two bottoms.

Remember when you get the Stag you get highest plow value.

New Deere Sulky and Gang

Made to last—thoroughly braced throughout. Easy to handle—a boy can lift bottoms when team is standing. Not a cheap piece of material in the New Deere. They give from 3 to 5 years more service than ordinary makes. Adjustments stay when once made and can be made in the field. In addition to foot lift, the gang has a hand lift. Equipped with John Deere steel eveners.

Any style John Deere bottom can be furnished.

SAFETY FIRST IS THE POLICY OF THIS COMPANY

We want our goods to last long and give service all the time

There is an acknowledged standard weight of copper. Our seven-Strand Cable is a very heavy rod. Prof. Day, in his Bulletin 220, says of it: "No. 6 has about 1½ times the standard amount of copper and is unquestionably the best of the six copper rods. Its resistance is lowest, meaning it is the best conductor. Its heat capacity, is highest, its durability greatest." To which we can add nothing beyond recommending its use.
