SUNLIGHT SOAP

is better than other Soaps but is best when used in the Sunlight way. Follow directions.

SUNLIGHT WAY OF WASHING

FIRST.—Dip the article to be washed in a tub of lukewarm water. Draw it out on a washboard and rub the soap lightly over it. Then roll it in a tight roll, lay in the tub under the water, and go on the same way until all the pieces have the soap rubbed on, and are rolled up.

Then go away for thirty minutes to one hour and let the "Sunlight" Soap do its work.

NEXT.—After soaking the full time rub the clothes lightly out on a washboard, and the dirt will come out; turn the garment inside out to get at the seams, but don't use any more soap; don't scold or boil in a single piece, and wash through two suds. If the water gets too dirty, pour a little out and add fresh. If a streak is hard to wash, rub some more soap on it, and throw the piece back into the suds for a few minutes.

LASTLY COMES THE RINSING, which is to be done in lukewarm water, taking special care to get all the dirty suds away, then wring out and hang up to dry.

For Woolens and Flannels proceed as follows:—

Shake the articles free from dust. Cut a tablet of SUNLIGHT SOAP into shavings, pour into a bowl of lukewarm water and wash in the latter without rubbing. Squeeze the water out, and rinse thoroughly in two relays of lukewarm water. Squeeze out water without twisting and hang in the open air.

The most delicate colors may be safely washed in the "Sunlight" way.

5c. Buy it and follow directions. 5c.

SELECTIONS

BEANS IN BOSTON.

Some Striking Figures Which Show Their Amazing Popularity.

More money is spent each year in Boston buying baked beans than would buy the largest battleship in the United States navy.

In 1904 the gross receipts of beans in Boston were more than 68,000 barrels. In each barrel are five bushels. The average price at which these were sold by the wholesalers was \$1.85 a bushel, and when these beans were sold again by retailers to their consumers they brought an average of 12 cents a pound, or a grand total of \$8,598,272.

There are other places where beans are used, but they are not Boston beans and can never be unless the man who superintends their baking happens to have served an apprenticeship in some of the Boston bakeries.

So tremendous has the demand for baked beans become in Boston that two companies have been formed whose business is to bake beans for restaurants and quick lunch establishments. One of these companies uses an average of 4,000 quarts a week and the other 10,000, yet the beans that these companies bake are but a drop in the bucket compared with the consumption of the city.

The most remarkable feature of this remarkable consumption of beans is that the demand is steadily increasing and that 15,000 more barrels of beans were sold in Boston in 1904 than in 1903. There are seasons in which the demand for this staple is greater than others, notably the months from Thanksgiving to April.

Taking the receipts in Boston for 1904 of 68,732 barrels, that would give the number of bushels 343,660 or 10,907,120 quarts, weighing 21,944,240 pounds.

Accepting the population of Boston as approximately 553,000, this would give each inhabitant—men and women, boys, girls and babies—an average of thirty-seven quarts. These thirty-seven quarts of beans would weigh 148 pounds.—New England Grocer.

Evolution of Climates.

A theory of the gradual evolution of the climates of the earth which has at least the merit of being interesting was recently set forth before the Philosophical society of Washington by Mr. Marsden Manson. In early ages, he thinks, the globe was enveloped in an atmosphere dense with watery vapor, through which the sun's heat did not penetrate, but the internal heat of the earth itself, confined beneath the atmospheric blanket, produced a warm climate even in the polar regions. Finally as the oceans gradually cooled the atmospheric vapors became less dense, the sun's rays broke through, and under solar influences the climates of the globe arranged themselves in zones. During the process of cooling and before the influence of the sun's heat became predominant on the earth's surface a period of glaciation intervened.—Youth's Companion.

Boys and Balloons.

The French schoolboys had recently to pass a government examination at the close of the primary course. The invention of balloons was the subject given. "Balloons were invented," wrote one boy, "by the brothers Montgolfier, who were paper makers. They took a large balloon and filled it with paper. They then set light to the paper, and the balloon went up." Another boy included a treatise on ballast in his essay, with disastrous consequences. "When the aerostats, such being the name given to men who ride in balloons, wish to come down they fetch some sand and gravel and put it in the balloon. The latter is thus rendered heavier and more elongated." A pity statement made is. "The aeronaut places himself within the balloon, the basket being used for provisions."

A Strenuous College President.

The energy of President Harper of the University of Chicago is both the despair and the admiration of those who know him. His driving power is extraordinary. Said a member of the faculty: "Dr. Harper knows all about the 'eight hour day.' He puts in two of them every twenty-four hours." For years Dr. Harper went to bed at midnight and rose at 5. To a theological student downtown because he could arrange no hour to meet the president for advanced work Dr. Harper said, "Are you free at 5:30 in the morning?" "Yes," was the startled answer. "Then come every day at that hour." And the arrangement was concluded on that basis.—World's Work.

An Atmospheric Test.

A curious test of the atmosphere was tried in the French senate recently. General Billot complained of a headache at a recent session and attributed it to gas given off by the heating apparatus. The engineer was unable to find any defect in the apparatus. Recourse was had to a "bird test." Bengalee birds are reputed to be very easily asphyxiated. One was hung in a cage for eight hours over the furnace in which General Billot contracted the headache. As the bird was lively at the end of that period, the atmosphere was pronounced pure.

A Rare Bird in England.

The zoo has just received the first hummingbird which has reached the garden and the second which has ever arrived in England alive. It was brought from Venezuela by Captain Fain, and its food is syrup mixed with extract of beef. The bird is a dark green in color, with blue cheeks.—London Chronicle.

MacGowan of B. C. Legislature Makes a Startling Speech in the House.

Victoria, B. C., Jan. 16.—Debating his honor's speech in the Legislature yesterday, Premier McBride supplemented the indefinite suggestion as to railways in the speech with the announcement that no legislation would be forthcoming hereafter contemplating land or money subsidies, the Government holding that railway construction should proceed as an unassisted business proposition. That the Government has not solid support in this was evidenced by the attitude of MacGowan (Vancouver), who, in seconding the reply, declared himself convinced of the legitimacy of the land grants properly safeguarded.

MacGowan showed great independence, and incidentally paid his compliments to the federal administration. Ironically analyzing the recent "victories" in the new provinces, he predicted such a victory of graft and corruption would have as reactive effect, spelling annihilation.

Discussing better terms, MacGowan created a sensation by urging an independent provincial demand for better terms from the Dominion, if necessary, by monster petitions to the throne, and, "falling better terms, a dissolution of the unfair ties, binding British Columbia to the confederation of provinces."

MacDonald, the Liberal leader, attacked the Government for destroying the free school system and granting the Kian Island site for Grand Trunk Pacific terminals, challenging the legality of making such a deal by order in council without Legislative consent.

Don't judge a man by his first friendships in a town; judge him by his last.

UP AND DOWN.

A Very Difficult Bottle Trick and How to Perform It.

Here we have the picture of a boy with a bottle standing on the back of his head. You will say, perhaps, that you can easily perform that little feat, and we do not doubt that you can. But that is only the first step in the amusing task that we are going to set for you.

We want you, if you please, to balance a bottle on the back of your head and then to stoop down and pick up a silver quarter from the floor with your

HOW THE TRICK LOOKS.

lips and rise again, all without letting the bottle fall or touching it with your hand. If you think the experiment might be fatal to the integrity of the bottle—that, in other words, there might be a smash-up—use a tin canister or something of that kind instead of the bottle.

But the use of the bottle makes the feat decidedly more interesting, from the very fact that a smash-up is possible. The use of a tin vessel, therefore, would be too tame to suit most boys.

Now, if you will follow our directions closely, you may succeed in the feat and bring the bottle out safe and whole.

First, bend the head forward until the chin rests on the breast; then balance the bottle in its place, on the crown of the head. Be sure to do the beginning well, and the rest will be easier than it looks.

Bend the knees gently, coming to the floor on one knee. Then lower the hands to the floor and, thus supported, push the feet gradually and slowly back until the face is able to reach the quarter.

Resuming the first position is merely going through these movements in reverse order. Slow, steady, even, careful movement is the secret of success in the feat.—New York Mail.

INDOOR SPORT.

The Adverb Game Makes Fun, and Any Number May Play.

This is a simple little game, in which a player wins by noticing the manner in which the other players answer his questions.

The players take seats in a row, and one is sent out of the room, lots having been drawn to see who this one will be. When he is gone the other players agree on an adverb, and when he is called back he must ask each player a question—no matter what—and the answers are to be given in a manner expressive of the adverb.

Let us say that the adverb selected is "crossly," then every question that the recalled player asks is answered in a cross or snappish manner. If "mildly" be the adverb the answers are given accordingly. "Laughingly," "carelessly," "quickly," are other adverbs that might be used.

The player scores a point when he guesses the adverb, and then some one goes out in his place. If he fails to score he has to go out again, when another adverb is selected, and he comes back and tries a second time.

He continues going out and coming back until he guesses the word.

Atmospheric Pressure.

If you desire to obtain a vivid idea of the force of atmospheric pressure try the following simple experiment:

Place an ordinary wooden ruler on a table in such a manner that half of it will project beyond the edge of the table and then over the table and the portion of the ruler thereon lay a smooth sheet of paper.

Now, if you strike the exposed part of the ruler it will in nine cases out of ten break in half, and yet the sheet of paper on the table will neither be raised nor moved in the slightest from its position. The simple reason is because the atmospheric pressure exerted on the paper is more than sufficient to counterbalance the force of the blow which is struck at the ruler.

By means of simple experiments like these one can learn a great deal of science.

The Best Way.

If I make a face at Billy. He will make a face at me. That makes two ugly faces. And a quarrel, don't you see? And then I double up my fist. And hit him, and he'll pay me back by giving me a kick. Unless I run away.

But if I smile at Billy. "He sure to make him laugh. You'd say, if you could see him. 'Twas jollier by half. Than kicks and ugly faces. I tell you, all the while. It's pleasanter for any boy (Or girl) to laugh and smile."

Wake up Your Liver

Immersed in Boiling Water.

London, Jan. 17.—Through a misstep John Watson, an employee of Hyman's tannery, plunged headlong into a vat of boiling water last night, and was so badly scalded that he will die. Watson is a young Scotchman, who came to this country a short time ago.

True Bill For Manslaughter.

Toronto, Jan. 17.—The grand jury in the Assizes yesterday returned a true bill against Abe Carter, on a charge of manslaughter, in the shooting of the man Miller at the Woodbine some weeks ago.

Many a Woman is Taking Headache Powders

who ought to be taking Bu-Ju. The kidneys are making the headache. They are not doing their work properly—not purifying the blood—not ridding the system of poisons. These impurities stagnate the blood—irritate the nerves—and bring the headaches that so many women suffer with.
