To Avoid Lightning This Summer

Every year quite a large number of people are killed by lightning

because they did not know what to do in a thunderstorm. First of all, it is safer to be indoors than out. Most people get killed when out in the open. If you are caught in a thunderstorm, then don't be afraid of sheltering under a tree just because you have heard that it

is dangerous. It is dangerous to shelter under a solitary tree, because lightning likes to strike the highest point, and a solitary tree is the highest point as a rule for some distance around. But you are pretty safe if you tak shelter in a wood. A tree in a wood is seldom struck,

Certain trees are more dangerous than others. If you have a choice

between an oak and a beech tree, then take the beech tree all the time.

A far greater number of oak trees are struck than beech trees. Eln trees are nearly as dangerous as oak trees. Avoid big crowds and collections of animals. For some reasonprobably the warmth that rises from their bodies-crowds of animals

and persons are liable to be struck by lightning.
