Sub-excursions by members of the branch to localities at some distance from the city have been made during the past season; to High Falls, on the Lièvre; to Templeton and Buckingham down the Ottawa River; to Casselman, on the Castor River; to the Chats Rapids, to be specially reported upon by Mr. R. B. Whyte, and also, as well, to less distant points. At High Falls Epigwa repens, the Mayflower, sometimes miscalled the Trailing Arbutus, was found in magnificent profusion, and large bunches of the exquisite flowers were brought back to the city. The lovely Calypso borealis, a deliciously-scented but very rare orchid, was also obtained there in unusual abundance by Mr. R. B. Whyte. At Templeton Mr. W. Scott found Spivanthes Romanzoffiana in profusion in a hay field close to the East Templeton wharf, and between the wharf and the lighthouse keeper's house; also Thalictrum purpurascens. Casselman, and Moose Creek a few miles beyond that place, have again this year provided rich treasures for those who went to seek them. Cardamine rhomboidea, the tall erect form, with stiff and almost sessile leaves, only previously recorded from Hull, was there found in great abundance. A violet taken to be Viola rotundifolia, was found at Moose Creek. Perhaps the most interesting find of the year was Flærkea proserpinacoides, found by Prof. Macoun at Casselman early in the season. A trip to Buckingham by Prof. Macoun and Mr. Scott in October gave new localities for Potamogeton Robinsii, and what also is very rare here, Polyconum dumetorum var. scandens. On the mountain at the back of Old Chelsea Carex Hitchcockiana and Aspidium Brauni were discovered, while on the slope of the mountain running up from the north shore of Kingsmere, Carex Houghtonii was collected. This is the only locality yet found near Ottawa, and it is very rare here. Nearer home some other interesting discoveries were inade. Prof. Macoun collected Eleocharis intermedia near Leamy's Lake, and Mr. J. M. Macoun at Hull found Viola rostrata, the rarest of all our violets in this locality. It has only once previously been collected here, when two plants were found growing in the Governor-General's Bay at New Edinbugh. Mr. Scott found undoubted specimens of Ranunculus circinatus, the stiff water crow-foot, in Patterson's Creek. Claytonia Virginica frequently sought for unsuccessfully

in this locality, was last spring found in abundance in the woods
