IRON ADMINISTRATION

A HIGHLY PALATABLE PREPARATION OF IRON CHLORIDE.

IRON is easily chief among Hæmatinics. According to T. Lauder Brunton, M.D., D.Sc., F.R.S., it increases the number of blood corpuscles; the percentage of hæmaglobin in them, and functional activity of all the vital organs; as a vascular tonic classes with digitalis and strychnine, and in its alterative qualities with arsenic.

The tincture of Chloride of Iron has long been recognized as the most efficient of iron preparations, the objections to its continued administration, its highly astringent taste, its corrosive action on the teeth, and constipating action have, however, been hitherto insurmountable.

We have succeeded in preparing an entirely palatable syrup of officinal Tincture Iron Chloride combining all its virtues with none of its drawbacks. It is prepared after the formula of Dr. G. W. Weld, and is entitled:

“WELD’S SYRUP OF IRON CHLORIDE.”

(P., D. & CO.’S)

We earnestly recommend its trial to all the profession, believing it to be the most acceptable preparation of Iron ever devised.

Samples will be sent on receipt of request to physicians who indicate their willingness to pay express charges.
