

JUNE, 1902

...accessible for inspection and should a leak occur, ...
 One of the late improvements in this kiln is the introduction of steel foundations and the use of brick and ... in the construction of building, thus adding permanency to the structure and reducing the fire risk from outside exposure to a minimum. The nature of the system renders the kiln of itself absolutely safe from fire, regardless of the construction of building. The entire construction of the Standard is strength and simplicity embodied, and no expense has been spared to make it the most useful and practical kiln on the market. The experience of its users shows that the Standard kiln is actually all it is represented to be. The Bodow Lumber Company, of Stamps, Ark., write that they have been using the Standard dry kilns for the past eight years. At present they have nine of them, all of which are giving perfect satisfaction. They consider "The Standard" the best manufactured.

The Standard dry kiln has been on the market fifteen years. It has been given the hardest tests possible and has never failed to do all that is claimed for it. When its makers say that it will dry any and all kinds of wood, they do so confidently and without fear of contradiction, because it is doing that every day, being in operation in almost every climatic section of the country. In their regular advertising space in this issue The Standard Dry Kiln Co. make mention of the "Standard" literature on lumber drying, which will be sent free to all interested in the subject.

Wilson Bros., of Collingwood, Ont., manufacturers of dressed lumber, propose to be right up-to-date, inasmuch that their product will in the future be dried by the Standard Moist Air System. This progressive firm is now putting in two of the latest improved type "Standard" dry kilns, which are to be constructed of brick, thus reducing the fire risk from outside exposure to a minimum. The nature of the Standard system renders the Kiln of itself absolutely safe from fire.

To Purchasing Agents:

GENTLEMEN :

Corner 22nd and Centre Avenue,

CHICAGO, October 12th, 1901.

Preparatory to increasing our manufacturing interests at Vicksburg, Miss., we have decided to close out and wind up a number of our scattered yards in Mississippi and Arkansas. The stock consists of several million feet of all kinds of Hardwood Lumber, Yellow Pine and Cypress, well seasoned and in good condition for immediate use. We propose to put a price on the above named material that will move it, and make a grade that will be an inducement to the purchaser.

Owing to the rapid wholesale manner in which we move and handle lumber we do not consider it practicable to issue a stock sheet or make standing quotations, for which reason we solicit your inquiries for any material that you are in the market to buy or will use in the future, and if you will take the time to furnish us the above information, we will make you some interesting quotations.

Respectfully yours,

GEO. T. HOUSTON & CO.

 Head, 2, Tub and
 Box
 Boards,
 Etc., Etc.

The swing is made of steel and is very light and strong, and dogs very close to saw, thus reducing the waste to the least possible amount. The Saw on this machine is 40 inches in diameter, or larger if so desired. The mandrel and balance wheel are very heavy. The pulley is 12 inches diameter, 10 inches face. Weight about 1300 lbs.
