FREDERICTON, N. B. MARCH 18, 1893

### WORKERS FOR GOOD

Not long ago two rough looking men were standing on a street of one of the large American cities, looking at the Salvation Army marching past with its dissonant efforts to bring music out of a harmonica, a drum, a tambourine and a cornet. The two men were in for a good time, and both held as much bad liquor as was convenient. As they watched the parade one of them turned to the other and said: "Well I can break up this procession in about a minute." The other asked him by the arm, as he was about to follow his words with an attack on the parade. "Hold on, Bill," he said, "there's a heap better people than you in that procession." Bill thought it over till the band had passed, "You're right," he said, "they're a heap better than me." And the attack was not made.

The Salvation Army has fought its way till it has conquered a place in the respect of those farthest from its methods and even from its purpose. It has passed what has been called the "trickster era" of its existence. The time when it was regarded as fair game for the roughs and the street and carterials in the past. The Salvation Army methods were those that brought it prominently before the people. There was no missing the drum, the tambourine, the cymbals, the cornet and the other instruments with which the devout but unpractical hand manifested their zeal for the salvation of themselves and their fellow creatures. Their methods challenged the ridicule of the learned and the roughs. But the army bore insults, injuries, arrests and other annoyances of their work with a patient confidence that it was a part of the difficulties that they were to overcome on their road to salvation.

But gradually men came to know that the rough exterior, the noise and vulgarly, covered a new force for good in the world. They found that the Salvationists were not only intent on the safety of their own souls, but were also relieving misery and working honestly, earnestly and with success to make good men and women of the depraved, the wicked and the lawless. It was seen that the army was not afraid to charge into the depths of wickedness to bring sinners to repentance and to lead an upright life and men found that its methods were adapted to those whom they attempted to help.

The Salvation Army is to-day respected as a force for good in the world. One of the New York journals in commenting on its progress, says: "Many reasons for the success of the Salvation Army can be given, but they are all condensed in one: It is honest, trying to do a work which the organized churches have largely failed to do. It makes a large and, in the opinion of many, a dangerous use of emotion. Some of its methods seem peculiar to intelligent people and others are characterized by vulgarity and bad taste. It is utterly devoid of any intellectual character, and the rank and file of its members not capable of thinking, either deeply or clearly. But in these defects part of its strength lies, for they enable it to direct the whole of its enthusiasm, zeal and earnestness backed by its effective organization, to the regeneration of the pariahs of society and the church. The people it is trying and so successfully trying, to reach are just the people to be touched by unreasoning emotion and by the bizarre forms of worship which distinguish the Army.

And, besides accomplishing a great deal of good itself, the Salvation Army has reacted on the churches. It has compelled them to pay some attention to the problems it has set itself to solve, and to cultivate some of that emotional enthusiasm which it has so abnormally developed. The staid Anglican Church has complimented it by organizing a "Church Army" which works on much the same lines. And all the other Christian denominations have, in a measure, caught the spirit that animates it, which after all is merely a crude expression of the spirit of Christ, who came before all else to seek and to save those who are lost."

## THE BOSTON FIRE.

How Lives Were Saved by Skillful and Courageous Work.

A very destructive fire visited Boston Friday evening of last week, and before it could be got under control over \$5,000,000 worth of property had gone up in smoke. The fire started in the Ames building, Lincoln street. The story of the fire as told by Mr. Young, the manager of the Larist manufacturing company:

"The first we knew of any fire was a puff at the farther end of the room, followed by the screaming of the girls. The room filled with black, bad smelling smoke within a minute, driving everybody to the windows. We had a time to look around us even. Everything had to be dropped, looks, ornaments, cases and umbrellas even.

"I saw Miss Eason, one of our girls, jump from the window before a warning word could be given. Two or three more did likewise, and when we got there we saw people in the street trying to catch them. My son, H. C. Young and F. H. Toly of Thomaston, Me., were with me, having called on business a few moments before. All three of us held somebody from jumping till we could look about us. Toly is a sea captain, and was out on the coping the first thing. He called to us that there was a safe way down by way of a telegraph pole, and we all made our way along the coping to where he was awaiting us. I handed Miss Edmont, one of my employes, to him across the gap, my son followed with a little boy who worked for us, and Miss Magdalen Love was then helped on to the pole. We all slid down and were saved.

"Our loss will be about \$500," he added. "We could get no insurance on it because of the heavy risks on the entire building, but we are arrangements with the Firebridge people that covers us to the extent of \$2500.

Jumped From the Third Story.

Miss Brooks Alton was one of seven girls who were employed by the Larist Manufacturing Company in the Ames building, and who jumped from a third-story window in order to save her life. She had a pretty good call, however, although she came out of the excitement with nothing more serious than a sprained hip. She said:

"All the male members of the party crawled out of the windows, and escaped by sliding down a pole which stood near the building. One of the girls followed them, and four of us jumped into the street. I have positively forgotten the names of three of the girls who did this, and that leaves two out of the shop about whom I know nothing, but who, followed our example.

As I stood on the window coping, a man jumped from above struck me on the head, I looked down and saw him dashed to death on the pavement.

"Another young man jumped from over my head and was caught on the wire. When I jumped I was expected that I would live to tell of it.

Still, I felt that there was no chance for me if I stayed waiting on the window, while I knew that I could only be killed by falling. And this seemed too terrible to me, so I took the chance.

Wireless Escape From an Electric Cable in the Mill.

Deputy Chief John F. Egan, as soon as he arrived at the building, went to the roof of Bowen, Darrid & Co.'s building, with one of the employes for the purpose of opening the roof lights. Before he could escape from the roof after leaving the ladder by a portion of the roof fell in, and he found himself and the unknown employe of the firm wholly cut off from escape to the street.

Who Were Called for Help, while the immense crowd shuddered at the sight and lifted their hands toward the roof in an attempt to attract the attention of the firemen. For some reason or other no ladder was at hand, and in his desperation he climbed out on to the eaves of the roof, and threw his hat into the street to attract the attention of the firemen but without effect.

The flames in the meantime became so hot that he was forced to change his position, and he was around to the Kingston street side of the building where he saw a cable wire running across to the building on the opposite side of the street.

## NOTES AND NOTIONS

Running Comments on Passing Events

Sundry Ebulitions in Prose and Rhyme.

How the Domestic, Social and Literary World is Wagging.

The Cure of a Piano.

To keep a piano case in good order great care must be taken in the application of so called "piano polish," which is constantly being off red if the purpose of making the instrument look bright. A very little polish should be used, and that must be rubbed off well with a soft woolen cloth. The best way to clean a piano is to use lukewarm water and a fine oil chamade. Go over the case a little at a time and rub dry with your chamade skin. Brasses may be removed by the application of a little punice stone. Always use a silk duster for a piano.

Examine Your Bees.

Beekeepers should make an examination of their bees as soon as the weather admits of it. Bees on their summer stands have consumed more food this winter than during the same length of time in any previous winter that I have any knowledge of. Bees that were rather light last fall are almost destitute of stores now, but the bees are strong and healthy and it will not pay to let them starve after they are almost wintered. - Mirror and Farmer.

Footish Women.

A New York woman wears a ring in which is set in a circle of diamonds her first baby's first tooth. A London lady of high degree wears set in the jewels of her bracelets a tooth extracted from the mouth of her pet poodle. Another affectionate creature uses the skin of a cow favorite horse as a heart rag for her bonnet, and has a defect pet pig mounted in a lifelike attitude by the taxidermist for an ornament on her writing table.

Servantes of the Bear.

A driving glove with the side pieces of the fingers made of roughened India rubber to prevent slipping of the reins. A retouching device, consisting of a handpiece with curved base and a stylus operated by an electro magnet and spring.

An automatic match lighter, operated by a small lever, by which the match is held in the holder and ignited. A fire-killing device, comprising a long wire handle attached to a loop which holds a material suitable for absorbing inflammable substance for liquids.

A machine for rolling and bending metal into spiral form, combining a set of rolls for shaping the metal with guides and a chamber for receiving the coil. A bicycle footrest and lock combined, the rest being hinged so that it may be turned over until it projects between the wheel spokes where it is locked by a key.

A fan, a belt and pulley, attached to a baby coach in such a manner that the progression of the coach causes the fan to rotate over the head of the child in the vehicle.

An Historic Lesson.

Who ever thinks of connecting such a commonplace article of diet as the lemon with the romantic history of ill-fated Anne Boleyn? Yet, indirectly she was the cause of its first introduction into England and so into popular notice. Henry the Eighth who it is said himself of his wives like a brute, certainly was then like a prince—gave such splendid feasts and entertainments in his coronation of Anne, and of their previous nuptials as had seldom been accorded to queens of the royal blood. These highly entertainments were in turn followed by the great civic feasts of London, for which the whole world was searched for delicacies to add to the splendor. At one such banquet, graced by the presence of the royal pair, a lemon was introduced as an elegant novelty. To an epicure such as Henry the acquisition of a castle in France would have proved less acceptable, and such was the importance attached to the discovery—so says an old biographer—that a special record was made of the fact that this of this precious lemon was six silver pennies.—Kate Field's Washington.

## Complete Manhood

AND HOW TO ATTAIN IT.

A Medical Work that Tells the Causes, Describes the Effects, Points the Remedy.
