

Laboratories, No. 5 Queen's Park,

Toronto, April 3rd, 1916.

SIR.—I have the honour to submit a further report on the disease Joint-ill.

Extensive experiments were carried on during the summer of 1915, in connection with this disease. The report contains a full account of these experiments and the results obtained.

Although these experiments have not been uniformly successful, I am confident that the methods advocated in this and other reports, will, if properly employed, greatly reduce the mortality of the disease.

One of the most interesting facts brought to light by this investigation is the presence of similar organisms in the milk of the dam as are found in the diseased joints of the foal. The exact significance of this cannot be stated at present.

All of which is respectfully submitted.

FRANK W. SCHOFIELD.

The Hon. JAS. S. DUFF,

Minister of Agriculture,

Parliament Buildings, Toronto.
