

Miscellaneous.

Is Consumption Contagious?

THE THEORY REPUTED BY A COLORADO SPRINGS PHYSICIAN.

Knowing that there are more cases of pulmonary consumption at Colorado Springs in proportion to the population than in any other city or town in the United States, and perhaps in the world, I wrote some time ago for information to Dr. S. E. Kelly, of that city, well known as a writer on consumptive and climatology, and whose experience in the treatment of this disease has been large and extends over a period of many years. In reply I received the following:

The danger of contagion from a consumptive is easily controlled that it is by no means necessary to separate consumptives from healthy persons. You ask me concerning my experience here. At least a third of our population are consumptives. The town, which contains some fifteen thousand people, has been established twenty years. An inquiry made by a disinterested party into the number of cases of consumption that were known to have originated in the town resulted in a report of twenty in all. Although it is probable that the number of cases is much larger, it is not likely that the number of cases of consumption that were known to have originated in the town resulted in a report of twenty in all.

At Colorado Springs the consumptive mingle with other residents of the city on all occasions—at church services, theaters, and in the over-crowded and crowded rooms of private residences during social functions; they reside in the same hotels, boarding-houses and private dwellings with healthy persons, and they are not separated from them by any special precautions. Notwithstanding this apparent indifference on the part of the local authorities to the contagion of the disease, only twenty cases have been originated in Colorado Springs in twenty years.

At Davos Platz, in Switzerland, where I spent a winter a few years ago, a very large number of consumptives were staying. The hotels were crowded, and of the 1,500 strangers in the village about one thousand were consumptives. At the hotel at which I stayed there were about one hundred and twenty consumptives staying. The hotels were crowded, and of the 1,500 strangers in the village about one thousand were consumptives. At the hotel at which I stayed there were about one hundred and twenty consumptives staying.

Dr. Clinton Wagner, in the N. Y. Medical Record.

An Apple Social.

When all the company is assembled, pass to each a place on which is laid a large apple and a fruit knife, for the opening contest is to see who can cut the longest unbroken paring, he that is most successful being rewarded with a kiss.

The peeled fruit is laid out in quarters and all the seeds are carefully collected in a glass tumbler or small glass jar. This is then handed round so that each may guess how many seeds it contains, the one coming nearest the correct number being declared the winner.

An apple race is next in order, eight or ten apples being laid in a row on the floor, while the contestants take turns in trying who can take up with a spoon and place in a basket the greatest number within a given time.

Boiling for apples in a tub of water might be introduced if it was a young folks' party, while older ones will have much amusement by trying to eat an apple without using a knife, or without touching it with their hands.

All of the victors in these contests should be given small prizes, as a sachet in the form of a silver apple, an apple-shaped confection or a sack of soap, or a quantity of some small commodity of an apple on a stick, with buttons for eyes, nose and mouth, and a corky for a hair adorned with a chicken feather or bit of green.

Finally the pie may conclude by the company standing in two lines and passing a number of apples rapidly from hand to hand, the row passing the fruit quickest without dropping it being the victorious side.

Appropriate refreshments for such a occasion would be German apple cake, apple tarts, apple jelly, apple snow and baked sweet apples and cream, together with sandwiches and coffee or chocolate.

Beauty and Health to Fair Women.

MISS ANNE PATTERSON, OF BACKEVILLE, N. C., GIVES THE METHOD OF SERVING UP THE GENERAL HEALTH, TAKES ON THE HEALTH OF EARLY YEARS.

Some remedies are nothing more than a temporary stimulant, and the reaction aggravates the disease. Where the system has become run down, and nervous debility is more or less advanced, South American Nerve will cure. It strikes at the nerve centers and builds up the system by removing the real cause of trouble. Miss Annie Patterson, of Backeville, N. C., a lady well known in the Southern States, suffered terribly from indigestion and nervous debility and her case seemed hopeless. She accepted South American Nerve with hope that it was my different to other remedies, but her words are: "I had then only one bottle when my system began to take on the health of a warrior."

It is an unfortunate phase of human nature that a derogatory observation makes more impression than a word of praise, but a kind remark applied sometimes does a world of good at a critical juncture. And it is a great pity it is not often freer given.

Three Canadian girls who were on their way from Montreal to Chicago, were being turned back by the immigration inspector on the ground that they were violating the labor contract law.

D. M. Johnson, Esq., M. D., Fort Hawkensbury, certifies: "I have used Purina's Emulsion with great satisfaction where Cod Liver Oil failed for 12 months. It is superior as a dispelling the oil that patients never refuse to take it."

A compressed air locomotive is being tested in New York. It really moves a train of ten loaded freight cars, runs smoothly and is under perfect control.

50 CENTS Secures a Good Liver and GOOD HEALTH.

As a System Renovator and Blood Purifier Dr. Ayer's Liver Pills are Supplanting all Others.

There has been the demand that it's hard to supply it.

Constitution or Nervous Debility, due to the impurities of the blood, are cured by Dr. Ayer's Liver Pills. It is a great pity it is not often freer given.

Agricultural.

The Cranberry.

ESTABLISHMENT OF A CRANBERRY BOG—CRANBERRIES AS A MONEY CROP.

The establishment of a cranberry bog requires time, expense and patience, but once in good form there is little care in keeping it in condition. A moist soil is necessary. Experience has proved a peat or musk soil, free from loam or clay, is required, clean sand for covering the peat and arrangements whereby the vines are kept from freezing in the winter, and the vines are kept from freezing in the winter, and the vines are kept from freezing in the winter.
