

cross-breeding purposes. This booklet outlines the programs Canada uses to improve its beef cattle breeds and describes the desirable characteristics of some leading domestic breeds. (English, 1986)

Canadian Dairy Cattle

The soundness of Canadian dairy cattle pedigree and efficiency of milk production are recognized internationally. This booklet describes the university and breed-association programs devoted to animal health, performance testing and recording, sire evaluation, pedigree recording and type classification, all of which contribute to Canada's superior reputation in export markets. (English, 1986; French, Spanish, Portuguese, 1988)

Canadian Swine

Swine populations the world over can be improved through the introduction of breeding stock in which desirable characteristics have been genetically concentrated. This booklet outlines such characteristics of Canadian swine-breeding stocks, and describes how they meet quality requirements. (English, Spanish, Portuguese, Mandarin, 1986)

Pulses from Canada

Canada is a major world pulse supplier with increasing quantities of dry beans, field peas and lentils exported annually to more than 65 countries. This display board summarizes the Canadian pulse industry and includes 20 see-through packets containing samples of various pulse crops available from Canada. (English, French, 1986)
