^(a) As identified in the Statute of the IAEA.^(b) Material not irradiated in a reactor or material irradiated with a radiation level equal to or less than 100 rads/hour at one metre unshielded.^(c) Less than a radiologically significant quantity should be exempted.^(d) Natural uranium, depleted uranium and thorium and quantities of uranium enriched to less than 10% not falling in Category III should be protected in accordance with prudent management practice.^(e) Other fuel which by virtue of its original fissile material content is classified as Category I or II before irradiation may be reduced one category level when the radiation level from the fuel exceeds 100 rads/hour at one metre unshielded.
