London East London

W. COOK HEAD OF STATIONARY ENGINEERS

BRANTFORD, June 26.—The Canadian Association of Stationary Engineers in convention here elected the following officers this afternoon: Past president, W. Cook, Belleville; president, G. E. Moll, London; first vice-president, L. J. Tait, Montreal; second vice-president, D. L. Webster, Brantford; third vice-president, Fred Harper, Kingston; conductor, R. E. Leitch, Toronto; doorkeeper, George Lee, Ottawa; secretary-treasurer, John Hill, Hamilton.

Woodstock was chosen as the seat of the next convention.

PETROLEA WOMAN BURIED.

PETROLEA, June 26.—The funeral of Mary Foster, widow of John Foster of Enniskillen, who died on Saturday, June 21, at the residence of her son-in-law, James McClelland, took place on Monday at Hillside Cemetery. Rev. Mr. McCrae conducted the services.

The deceased had been a resident of Petrolea for the past four years. She leaves one daughter, Mrs. James McClelland. Another daughter, Mrs. John

Graham, died three years ago. She also leaves a number of grandchildren, two brothers, Richard and John Tweedie of Alisa Craig, and two sisters, Mrs. W. H. Robinson of Saskatchewan, and Mrs. David Robinson of Alisa Craig.

RAIN HELPED RASPBERRIES.

HYDE PARK, June 26.—The raspberries are developing fast. The recent rain was what was needed to further their development, although very detrimental to the picking of strawberries, which will mean many dollars loss.

It has been noticed within the last week that a blight has appeared on the apples, especially the winter fruit. A yellow shade appears, then the apples, which are quite large, fall to the ground. Farmers are beginning to fear that their crop will be a scanty one as there was two years ago.

BURIED AT TILLSONBURG.

TILLSONBURG, June 26.—The funeral of Thomas Fletcher, who died at his residence on Sunday, was held from the residence on Cranberry street to St. Charles Cemetery for interment.

The deceased was in his 79th year, and a pioneer of the district, and the large crowd at the funeral signified the very high esteem in which the deceased was held. The funeral services were conducted by the Rev. F. V. Vail of Otterville, and the body conveyed to St. Charles Church for special service, and a large number were unable to gain admittance there. He was a prominent Orangeman, and Tillsonburg brethren conducted the funeral services of the order at the grave. The pall-bearers were: A. Pettman, J. Pettman, Charles Fletcher, Wm. Fletcher and Thomas Langrell.

QUELPH LAWN BOWLERS.

QUELPH, Ont., June 26.—The first big after-the-war tournament of the Quelph Lawn Bowling Club will commence at the local greens on Dominion Day and continue for two days, and from present indications the entry list will be a large one.

The club has been exceedingly fortunate in securing trophy cups for this year's tournament, there being no less than three to be contested for. All of the trophies are challenge cups, and are beautiful examples of the art. The individual prizes for the winners and runners-up in the three competitions represent an expenditure of nearly \$300 and include silver coffee sets, hearthbrushes, solid silver spoon sets, silk umbrellas, mantel clocks and fur hats.

The Guelph greens are in excellent condition, and in addition to the lawn of the local club, the beautiful greens of the Homewood Sanatorium and O. A. C. will be at the disposal of the bowlers. This will insure continuous play on 14 foot greens. Secretary M. Yates of the tournament committee, is already busy receiving entries from outside points, and up to this evening had booked 25 teams from various parts of the province. The entries will close on Saturday evening at 8 o'clock.

LAKE AND RAIL ROUTE TO WESTERN CANADA VIA GRAND TRUNK RAILWAY SYSTEM AND THE GREAT LAKES.

Commencing Saturday, June 28, and on each Monday, Wednesday and Saturday thereafter Steamboat Special will leave Toronto 12:10 p.m., London 4:02 p.m., for Sarnia (Point Edward Dock), returning will leave Sarnia (Point Edward Dock) 8 a.m. Sundays, Tuesdays and Fridays. Connection made at Sarnia (Point Edward Dock) with Northern Navigation Company's Steamships for points on the great lakes and to all points in Western Canada.

Full particulars from any Grand Trunk ticket agent, or C. E. Horning, district passenger agent, Toronto, Ont. 24c

THE HOUSEKEEPERS' BUYING GUIDE

Our Consumers' League

BY ISABEL C. ARMSTRONG.

The Rift Within the Tooth

Sitting one day in the dentist's chair while he wielded the deadly drill, there popped into mind a quotation, in the queer way that quotations have a cropping up at unexpected moments, it was this:

"The little rift within the lute, which in time will make the music mute."

If there is anything in the world that can take the music out of life it is the little hole, bored a trifle too far for comfort, by the dentist's drill.

By the same token, if there is any place in the world where the stitch in time counts in saving nine, it is in the care of the teeth of the human race.

Oh, the discomfort that might have been averted, simply by a visit to the dentist in time, when the little break in the enamel is allowed to become a great big cavity, then it is a case of "Of all and words of tongue or pen, the saddest is, it might have been" (prevented by making a point of having the dentist thoroughly inspect one's teeth at least every two or three months).

The fact of the matter is, in the matter of the care of the teeth, save not only pain and extreme discomfort and nerve strain, but, as everybody knows, promotes good digestion and general health.

Medical science now seems inclined to regard a diseased tooth as pretty much the root of all evil to which the human system falls heir. It used to be: "You are generally run down; we will chop your appendix, then it is a case of general debility; we will not only dock, but dig your tonsils out by the roots."

Now, when the health becomes impaired and the edge is worn off the joy of living, the doctor is liable as not to point an accusing finger at an erring tooth and declare with severity: "You have neglected your teeth, and now you have a case of general debility; we will not only dock, but dig your tonsils out by the roots."

And, just think of all the money that neglected teeth can eat up, all the cost of elaborate repairs that might have been saved by having that little, economical stitch taken in time to save nine.

Going to the dentist once in two or three months to have an inspection of the teeth won't save them, however, from the ravages of disease. It won't keep them in good condition any more than a thorough house-cleaning will keep a house sweet, clean, free from dust and insectable.

Eternal vigilance is the price of good teeth. (Isn't it wonderful how many famous quotations or pertinent quotations apply to the teeth?)

Like doctors, dentists differ in their opinions in some respects. For example, practically every dentist has his own favorite device, which amounts to a hobby with him. On one thing they are all agreed, that teeth need regular cleaning, and the first thing in the morning, last thing at night, after each meal, it should be cleaned.

"The mouth is the gateway to your body," he says, "and it is a very important thing that you should keep the gateway clean. It is the slogan on which they are united."

This doesn't just mean a flit of a brush across the outside of the front teeth, because they show, but a thorough cleaning of every nook and cranny, every lot of crevice between teeth, to the very last tooth in the back of the jaw.

It is a thorough house-cleaning process, not merely polishing up the front windows to deceive passers-by.

One dentist swears by peroxide of hydrogen. It is his invariable prescription. "Best thing in the world for the teeth," he says, "afternooning the proportions in which it should daily be used for scrubbing the teeth and as a mouth wash."

Another dentist says: "The chief virtue in peroxide of hydrogen is that it flings as it does, it washes the particles of foreign matter out from between the teeth. (Apparently, the teeth have immigration problems in addition to all their other troubles.)"

Dentist Number Two has his pet "first aid" for cleansing the teeth, which he advocates using three times a day. Dentist Number Three is a strong champion of something else. It looks pretty much as if you could take your choice, provided you use any of the guaranteed harmless cleansers religiously.

Just Soda.

There is a certain little lady in the city who has made a discovery all her own. It came about through the application of logic and common sense.

Remember how the use of bicarbonate of soda, otherwise known as ordinary baking soda, was being recommended when the influenza epidemic was at its worst, recommended as a gargle and mouthwash because of its effluence in killing germs?

One argument in its favor was its cheapness, as compared with other suggested gargles.

If soda is good as a gargle and mouthwash, why not as a teeth cleanser? asked the little lady, in her own intelligence. Then she proceeded to use soda, and she found that nothing she had ever before tried left a more delightful sense of cleanness.

She assured, when telling about her find, that soda was keeping her teeth entirely free from tartar. Her theory was that since tartar was acid fat, the soda mixing with it formed a soap which was responsible for the foam that formed in the mouth, and aided in the cleaning process. In any previous she has found soda entirely satisfactory.

"Perfectly Harmless," Tra-la.

Asked about soda, the Dentist Man who has his own pet dentifrice, looked very wise and said, "Oh, yes, perfectly harmless. Just as good as a number of other things advocated."

It should think it would keep the teeth in sanitary conditions," said the unsentimental "Anxious Inquirer," endeavoring to appear learned.

"It is impossible to keep the mouth in absolutely sanitary condition," said the Dentist Man decidedly. "While I see the advantages of the use of soda, my own opinion is that there is nothing to equal it."

And here you are.

And so, the main thing to do in preventing teeth trouble would seem to be to pay frequent visits to the dentist for thorough inspections of the teeth.

Then make a point between times of keeping teeth as nearly perfect in respect to cleanness as possible. So far as dentifrices are concerned, the only wise thing to do is to get the assurance of the dentist that they will not prove injurious.

With regard to tartar, the Dentist Man who passed his opinion on the soda question, added the information that tartar is not a real thing, it is a deposit which forms on the inside of tea-cups, and is a big step in preserving the teeth and saving money, worry, suffering, and a little waste for a dentist to talk isn't it?

Quality Pays in Milk Business.

"One thing Western Ontario dairy farmers beginning to realize, and that is that QUALITY PAYS."

corned, one hasn't been made yet which is profitable for the ordinary dairyman, that is, a dairyman having less than twenty cows.

Rapid Cooling Important.

The next step, after insuring as far as possible the cleanness of the milk, is to see that it is cooled quickly. A lot of milk is spoiled by improper treatment, which they put the milk into the dairy, men now have cooling machines, into which they put the milk immediately after milking. We used to hear a good deal about aerating the milk. Now, a good many are taking the view that the sooner it is cooled and covered up tight, the freer it is from contamination.

"Personally, I am inclined to agree with this. I am only in the dairy business in a small way myself at present, so have not installed a cooling machine for the milk yet. We have the cans all ready, thoroughly cleaned and sterilized when we start to milk."

"As soon as we have poured the milk into the cans we place them in big tubs of water as cold as we can get it, and turn off the water as soon as it begins to get the least bit warm, and fill the tubs again with cold water, until the milk in the cans is thoroughly cooled."

"When We Were Boys."

"Talking of sealing up milk at once."

When my brother and I were boys occasionally we were left at home alone to do the milking and get our own supper. The first thing I did when we started to milk was to take a big bottle, milk right into it, seal it up as soon as it was filled, then put it down into the spring to cool. By the time we had finished milking and were ready for our supper, the milk was chilled. We used to wonder why it tasted so good. No other milk ever seemed to taste like that, and I am sure it wasn't just a boy's appetite and the fact that far-away things always seem best. I am convinced that the quality of the milk was due to the fact that it was sealed up at once and rapidly cooled.

Information Welcomed.

Have any more of our readers anything to say on the dairying business, the care of milk, or any comments on the statement, "Quality Pays"? If so, the editor of this department will be pleased to receive any communications sent to her, care of Our Consumers' League, The Advertiser, or the local personal opinions of any readers who care to call at her office to make criticism, suggestion, or offer advice that may prove helpful to other readers.
