

*Tumbling Weed.*

Another weed that we may expect from the west is known as Tumbling Weed (*Sisymbrium Sinapistrum*), also a member of the mustard family. It is reported by Prof. Fletcher as common around Indian Head, N. W. T. This annual is about two feet high, bears many pods, each well filled with small round brown-colored seeds. It matures its seed about the same time as mustard. Great care should be taken to prevent the plant getting a foothold in Ontario. It is not a native of the Northwest Territory but seems to have been introduced there. It is a native of Europe.

*Wild Carrot.*

The Wild Carrot (*Daucus Carota*) is a degraded form of the cultivated carrot and, like it, is biennial. It grows about two or three

WILD CARROT (*Daucus Carota*).

feet high and bears many flower clusters which, as they mature, form a sort of bird-nest structure with each umbel. Being a biennial it
