Sow a few annuals in succession, about the beginning of this month. Greenhouse plants require to be regularly watered, according to the heat. Propagate plants, going out of flower, by cuttings. Earth up beans, peas and potatoes, and destroy weeds everywhere. Pot a few layers of your finest carnations to blow in pots. Gather the seed of your spring flowers that are ripe. Pinks and carnations, raised from seed last year, will blow about this time. Lay shoots of those worth preserving, and water them moderately in dry weather. This is about the best season for budding roses trees.
