

See That Can? It Never Moves!

Other separator manufacturers have been trying to imitate it for five years. That shows their high opinion of a low, steady supply can which need not be removed in order to take the bowl out of the machine.

OUR machines are the only cream separators that have such a supply can. Other manufacturers have not been able to imitate it. That is because all common "disc" or "bucket bowl" separators have bowls fed through the top—such bowls must have the supply can set directly over them. Consequently, the supply cans are always the highest part of all common "disc" or "bucket bowl" machines and must

IN A GLASS BY ITSELF

Exclusive Tubular advantages are surprisingly numerous. Observe the low supply can, so easy to fill, not necessary to move to take out the bowl. The solid, one piece frame. The suspended bowl and bottom feed. Enclosed, self-closing gears. The crank, set just right for easy turning.

always be lifted off before the covers or bowl can be removed.

LOW supply cans are only possible in cream separators having a suspended bowl fed through the bottom. Our machines are the only cream separators having such bowls, and our patents prevent any other manufacturer from making them.

SUPPOSE you had the supply can, on any separator, full of milk and found it necessary to remove the bowl? It would be mighty inconvenient to lift the supply can off, wouldn't it? No need to with the Tubular.

PUBLIC appreciation of Tubulars has made their manufacture one of Canada's leading industries. 1908 sales were way ahead of 1907—far ahead of any competitor, if not of all competitors combined. Exclusive Tubular advantages will

make our 1909 business still greater. Write for Catalog No. 193. It will interest you.
