25 H.P. Model, fitted complete with Friction Clutch Pulley for Belt

Also made in 30 and 40 H.P. Models. The Heer two-cylinder opposed heavy Duty-type of engine and the four wheel drive are the two essential points which make this tractor a success. The engine is evenly balanced and set exactly in the centre of the frame; this distributes the power equally between both front and rear wheels. The Heer Tractor can travel on roads, climb steep grades, operate on softer ground, get out of ditches and bad places where rear wheel driven tractors have proven useless. Engine has three speeds, two, four and six miles per hour, and reverse. All four wheels controlled by one steering gear.

Our Guarantee We Guarantee all Heer Engines for one year against defects in material and workmanship, and will replace any such defective parts free of charge at our factory, providing the part to be replaced is returned to us charges prepaid. Our Guaranty, however, does not cover repairs or replacements necessitated by abuse, misuse or neglect
