leather, I made this test as follows:

I mixed the contents of a box of "2" in 1" Shoe Polish, bought at a retail store from regular stock, with four ounces of water and into this mixture put a kid glove, and left the said glove in the mixture in a bottle from June 15th to December 15th, 1905—a full six months. I then took the glove out, washed it and examined it. The fine leather of the glove was not affected in the least. It was as pliable and soft as when new, and was not affected in any way. This test, I consider, proves that "2 in 1" does not injure the finest leather.

I hereby state that these facts are

I hereby state that these facts are correct and true.

NEW CURE FOR HAY FEVER.

The latest treatment for the prevention of Hay Fever prescribes systematic and continued exercise taken in timely advance of the season for the appearance of the complaint. Specialists in the disease do not understand its nature. It is not now thought to be a form of catarrh, and local applications have been largely abandoned. The theory that it is rheumatism of the mucous membrane is not accepted. A more favored idea attributes the inception of Hay Fever to sluggishness of the liver, and bicycle riding is recommended to keep this organ is an active and healthy condition. After Hay Fever has arrived, the sufferer will find neither comfort or relief in bicycling, but systematic and easy wheeling during the preceding months is warranted to greatly modify the severity of an approaching attack or to entirely prevent it.
