FOR AND ABOUT WOMEN.

Urging Girls to Marry.

The tendency of some foolish married women to persuade their daughters to regard marriage as the chief end of life is thus dealt with in the *Pittsburgh Chronicle-Telegraph*. Any one with an intelligence above the grade of an idiot ought to know that a bad marriage is about the most unfortunate thing which could befall any woman, and that it would be infinitely better for her to remain single than to marry just for the sake of marrying. No people ought to know this better than those who are already married, and yet the women who are most miserable in that relation endeavor to good prudent young women into precipitate engagements. A self-respecting maiden will not unduly occupy her mind with thoughts of marriage, and she will do well at the outset of her career to observe men with discrimination, and not be betrayed into imprudences by the foolish chatter of older women. She is the best custodian of her own happiness.

Grand Duchess Alexandra.

The Grand Duchess Alexandra of Mecklenburg-Schwerin, the sole surviving sister of Emperor William I., was born during a ball at the royal palace. Queen Louise and her grand mistress of the robes, Countess Von Voss, left the ball suddenly and accidentally shortly after the dancing had commenced and the entertainment proceeded without interruption. Toward midnight the countess suddenly returned to the ball room arrayed in a dressing gown, and, regardless of court etiquette, hurried up through the maze of dancers to the king, to whom she announced the birth of a daughter.

Portuguese Royal Jealousies.

The young king of Portugal is growing exceedingly capricious and spiteful. He displays neither mental nor physical energy, unless to show in the preserves at his country seat. His wife, who is a clever and sensible woman, sees his tirades slipping away from beneath him, and can do nothing to avert the catastrophe. Her relations with the queen mother are exceedingly strained. A short time ago the elder of the two royal ladies found her daughter-in-law engaged in trimming a bonnet and bluntly exclaimed: "When I allowed my son Carlo to propose for you, I did not intend he should marry a milliner. The heads of the House of Burgundy, before him, have always married princesses and not trades women. Your family left the throne by its choice of a parrot. Buy your bonnets, and since you must be miliner, be so in some other way." The fact is that the queen mother has been so long the sovereign lady of the land without a rival that she cannot brook to see herself supplanted, least of all by her daughter-in-law. Moreover, she prefers her second son, the duke of Oporto, and would like to see him on the throne.

Nemeses in Petticoats.

The reign of the present autocrat of the Russia has been clouded from first to last in a most singular way by the agonies of the weaker sex. He had been but a few weeks on the throne when the first public execution of a woman in Russia for half a century took place. Sofia Petrovna, the intrepid and high-born ally of the nihilists, married to the gallows with the heroism of a saint. She had been concerned in the dynamite plot that ended the former Alexander's life. Singular spectacles it was for the world.

Useful and Domestic Receipts.

If you want to keep your house free from moths, never put down your carpet till the floor is thoroughly dry.

For relief of heart-burn or dyspepsia drink a little cold water in which has been dissolved a teaspoonful of salt.

Sunlight is one of the best disinfectants. The microbes that cause disease do not flourish in strong sunshine.

Always keep carbolic acid convenient for use. It is one of the best disinfectants and insect destroyers than can be used. A small quantity need only be applied at a time.

Where weeds persist in springing up as fast as they are cut off, kerosene oil may be poured on the plants; the effect will be to destroy them.

Orange Custard.—Peel and slice six oranges, put them in a deep glass dish with alternate layers of sugar, and let them stand for two hours. With one pint of milk and the yolks of three eggs make a soft-boiled custard sweeten and flavor with grated orange peel. When it has cooled a little, pour the custard over the oranges. Serve cold with a meringue made of the whites of the eggs.

Few people know how to cook water. The secret is in putting good fresh water into a clean kettle already warm and setting it to boil quickly, then taking it right off to use in tea, coffee and other drinks before it is spoiled. If it is allowed to run and simmer and evaporate until all the good of the water is in the air and the time and iron and dregs are left in the kettle, it is very bad.

Indian Pudding.—To make a very rich pudding you will require a pound of the best suet, chopped very fine, a pint of molasses, a pint of rich milk, four eggs, a large teaspoonful of powdered nutmeg and

fourths, and the same idea extends to broadsword, the blossoms, however, including common garden flowers, wild flowers, the rare productions of the hot house and various sorts of foliage. The colored silk must, with a broad sword on one side, usually on the left, with sleeves and frill and plain silk. One of the most popular materials for the coming season is crepe de chine. This is expected to take the place of India silk for all elaborate occasions and for general afternoon wear.

Black and gold and black and red are favorite color combinations to the large Spanish hats. The palest of yellow is called glaucous, then paille or straw, ebouler, ble d'or and old straw. Black is fast experiencing a renewal of popularity for costumes of silk, satin brocade and fine wool and also the still popular net dresses. Pale gray gowns are very fashionable and are especially effective when trimmed with black. Pale Parma violet with much blue in it is likely to be a season favorite shade in costumes. A build colored oyster blue, the green shades likely to be popular this coming season are yucca, a beautiful golden green magnolia leaf, a deeper blue; dragoon, similar to the old gaiter green; prairie and omelette, which describe themselves; Euphrates, a dull blue-green, and plantain, a pale, gray-blue-green. The newest blue shades are boatman's blue, the ever-popular navy, kingfisher, a light, clear peacock blue, myosotis, deeper than sky blue, and Niagara, a muddy blue, which is incorrectly named.

Solid head galleons are revived, and some have a narrow, rain fringe attached to one edge. Black lace is used to trim dresses of black royal silk. Among the recent importations of passementeries are skirt fronts, pettecoats, borders, Figaro jackets and sleeves. Flat gold braid or galloon, from one to three inches wide, is used to trim many of the new gowns. A velvet or fur collar, an effective trimming for children's frocks in plain gross grain ribbon sewed on flat, and herring bones or feather stitched with a silk of a contrasting color. Colored sashes will be worn with black dresses, the newest and most fashionable being of plaid silk fringed, very voluminous and most of them very handsome.

The tea jacket is a comfortable fashion which is considerably favored just now. The waist of a tailor-made gown may be removed at any time and replaced with one of these dainty jackets. Working skirts of semitulle, long, with and material are receiving considerable attention by ladies fond of outdoor exercises in the country. They are three and one-half yards in width and reach only to the ankles or a little above. Rough serge or the so-called blacking are the usual materials, either in dark or light gray. The jacket is made of the same material as the skirt, and is fastened with buttons, and is very high in the back. Rumor has it that French gowns are to be made with three white flounces covering the entire skirt and will be accompanied by shoulder capes trimmed with two or three flounces set on full to give breadth. The bodice of the hour is perfectly plain on the back and elaborately trimmed in front.

The man who thinks that if there is any filthiness in milk, it is better to get it out by even the very fastest, than to allow gravity to do its work, instead of forcing it out at the rate of four sals a minute, while it is fresh and young, has curious notions in his head. The much vaunted private dairy butter of the world is most all made through the gravity process of raising the cream, and if passably clean and pure, will make butter good enough for those who simply cream; but there was never a can of the cleanest of such milk set, that the cream separator could not extract from it more offensive matter than can any lard creamer on the earth.

In a recent paper Prof. Lintner spoke of the ravages of the cherry tree slug, *Eriocampa cerasi*, and said there was no need of such destruction of foliage by this pest as had been reported to him, for his larvae can be readily destroyed by spraying the trees with kerosene in water, an ounce of the powder to two gallons of water, or by dusting the foliage with fresh, air-struck lime.

There are six breeds of domestic turkeys in the United States, which are known as the bronze, the Narragansett, the black, buff, white and slate. The largest of the bronze turkeys, raised principally in Rhode Island and north Stonington, Ct. it attains a weight of forty-five pounds when two years old, and yearlings twenty pounds.

There is much in the breed, there is much in food, and there is more in the feeder than either. A good feeder will do fairly well with a good breed and poor feed, or with good feed and a poor breed. But a good feeder putting good feed into a good breed is the same of perfection in dairying.

Who enters here leaves pipe behind. The horse will be all the better for working his way through the winter. The man that knows the right use of a horse blanket is a first-class horse-man. Too many horses eat up during the winter all they have earned during the summer. The horse blanket saves feed and flesh—substance is used to make animal heat.

It is equally certain that money invested in fertilizers or fertilizing materials is frequently thrown away through ignorance of the nature and uses of the soil to which the fertilizer is to be applied. A soil on which any of the plant-forming elements is abundant and in an available form requires no such element in a fertilizer. It is only those elements which are deficient in the soil that must be supplied, and until farmers have learned some easy and practical method of determining the character of their soils the profit from fertilizers, home-made or otherwise, will prove an uncertain quality.

Woolen Manufactures Combine

In pronouncing Nasal Balm the sovereign remedy for croup. Mr. Horatio Collier, Woolen Manufacturer, Camerontown, Ont., states: Nasal Balm is the only positive remedy for croup that I ever used.

Cauliflowers are superior to cabbage in every respect for the table, and can be grown as easily. Paint splashes may be removed from window panes by a very hot solution of soda, using a soft flannel. Strongly vinegar by freezing it, and then remove the ice which forms on the surface; the water of the vinegar only freezing. Cornucopians contain more potato than wood. If they are used for fuel, and the ashes saved, it will be the most economical mode of disposing of them. Judgment in planning and arranging the work to be done will accomplish more than the amount of work itself. System and regularity save work and time.

Amongst all the pleasant things of life—and the all-bountiful hand of Providence has scattered the path of our days with innumerable pleasant things, if man would but enjoy them—amongst all the pleasant things of life, there are few more pleasant than a walk in the flower garden before breakfast on a sunny morning. To see those roses and still, though not motionless creatures—we mean the blossoms—opening their painted bosoms to the beneficent rays which give them their color and their loveliness, welcoming the calm blessing of the light, as if with gratitude, and seeking in their tranquil state of being, for nothing but the good gift of God, might well afford a monetary lesson; for everything in nature has its homily, to us, the eager hunters after fictitious enjoyment. How calm do they stand in their loveliness, how placid in their limited fruition, the elements that nourish them—how, in their splendid raiment, do they sparkle in the sun, how do they drink up the cup of dew, and gratefully give back honey and perfume in return!

The man who thinks that if there is any filthiness in milk, it is better to get it out by even the very fastest, than to allow gravity to do its work, instead of forcing it out at the rate of four sals a minute, while it is fresh and young, has curious notions in his head. The much vaunted private dairy butter of the world is most all made through the gravity process of raising the cream, and if passably clean and pure, will make butter good enough for those who simply cream; but there was never a can of the cleanest of such milk set, that the cream separator could not extract from it more offensive matter than can any lard creamer on the earth.

He's England's pride, and Scotland's joy, Old Ireland loves the white-haired boy; His name is sweet through all the valleys, The hills, and plains of gallant Wales. Then, hip, hurrah for Gladly, Say Sandy, John, and Paddy, A brow and bonnie laddie, A grand old chief is he.

God grant him strength, and length of days, And bless his righteous works and ways, And give him all his heart holds dear To brightly crown his great career. May God be good to Gladly! Say Sandy, John, and Paddy, A brow and bonnie laddie, A Grand Old Man is he.

DRUNKARDS

may not be aware that intemperance in drink is just as readily cured as any other disease which medicine can reach. As we run the risk of becoming a victim of this habit and to rid yourself of all desire or taste for liquor, you can do so if you will take

Pfief's Antidote for Alcoholism.

Originally one bottle is sufficient to enact a complete cure from three to five days, and at the comparative trifling cost of \$1 per bottle. No one thus afflicted should hesitate to try it. We guarantee the result. On receipt of \$5 we will forward a half dozen to any part of the United States and Canada. Charges prepaid, sent by mail.

PFIEI & CO.,

155 N. 2d Street, Philadelphia, Pa.

TO PARENTS.

Never neglect the health of your Children during the summer season. If they suffer from Colic, Diarrhoea, or Teething Pains, use Dr. COOPER'S INFANTS' STROU, and you will give them immediate relief.

Irish Marriages and Deaths.
