

LIST OF TABLES

<u>Table Number</u>		<u>Page Number</u>
2-1	Current emissions in the U.S. and Canada.	2-6
2-2	Air emissions from a typical 1000 MW coal fired system plant.	2-7
2-3	Summary of global sources, annual emission, background concentration, major sinks, and residence time of atmospheric gaseous pollutants.	2-8
2-4	Concentrations in bulk deposition and total bulk deposition of four ions at four calibrated watershed studies.	2-18
2-5	Conversion factors for concentration and deposition units.	2-25
3-1	The retention of nitrate, ammonium ion and total nitrogen by forested watersheds.	3-9
3-2	Annual budgets of bulk precipitation inputs and stream-water outputs of dissolved substances for undisturbed watersheds of the Hubbard-Brook Experiment Forest.	3-22
3-3	Description of watersheds in Canada utilized for mass balance studies.	3-25
3-4	Net export of major ions for calibrated watersheds in Canada.	3-26
3-5	Summary of total cation release, hydrogen ion production, and the cation release ratio for three manipulated watershed studies.	3-28
3-6	Terrestrial factors and associated criteria for determining the potential of terrestrial ecosystems to reduce the acidity of atmospheric deposition.	3-31
3-7	Terrestrial factors and associated data bases utilized for the interpretation of the potential to reduce acidity of atmospheric deposition.	3-31
3-8	Terrestrial characteristics of areas having high, moderate and low potential to reduce acidity for eastern Canada.	3-36
