

TABLE: CATEGORIZATION OF NUCLEAR MATERIAL

| Material | Form | Category I | Category II | Category III |
|---------------------------|--|--------------|--|------------------------------|
| 1. Plutonium ^a | Unirradiated ^b | 2 kg or more | Less than 2 kg but more than 500 g | 500 g or less ^c |
| 2. Uranium-235 | Unirradiated ^b : | | | |
| | - Uranium enriched to 20% 235U or more | 5 kg or more | Less than 5 kg but more than 1 kg | 1 kg or less ^c |
| | - Uranium enriched to 10% 235U but less than 20% | - | 10 kg or more | Less than 10 kg ^c |
| | - Uranium enriched above natural, but less than 10% 235U ^d | - | - | 10 kg or more |
| 3. Uranium-233 | Unirradiated ^b | 2 kg or more | Less than 2 kg but more than 500 g | 500 g or less ^c |
| 4. Irradiated Fuel | | | Depleted or natural uranium, thorium or low enriched fuel (less than 10% fissile content) ^e | |
| a. | All plutonium except that with isotopic concentration exceeding 80% in plutonium -238. | | | |
| b. | Material not irradiated in a reactor or material irradiated in a reactor but with a radiation level equal to or less than 100 rads/hour at one meter unshielded. | | | |
| c. | Less than a radiologically significant quantity should be exempted. | | | |
| d. | Natural uranium, depleted uranium and thorium and quantities of uranium enriched to less than 10% not falling in Category III should be protected in accordance with prudent management practice. | | | |
| e. | Other fuel which by virtue of its original fissile material content is classified as Category I or II before irradiation may be reduced one category level when the radiation level from the fuel exceeds 100 rads/hour at one meter unshielded. | | | |
