

workman as will be found between the covers of these two volumes, and I am sure my readers feel as I do in the matter.

Among those who might be named as having aided me materially, I may mention Mr. Woods, Mr. Reissman, Mr. Stoddard, and Mr. Penrose of Trafford Park, England, and Mr. Joseph Wilcox of Sidney, Australia, to whom I tender special thanks.

In conclusion, I may add, it is the intention of the publishers, should any new thing arise in connection with the steel square and its applications, to have the same embodied in the present volumes, or issue a supplementary volume if necessary.

If by these volumes I have been instrumental in aiding and assisting the operative workman to earn a little more wages than formerly he received, or have helped him to better his condition in any way, it will be a gratification and pleasure to me, and will, in some measure, repay me for all the effort I have expended in bringing together the matter contained in them.

FRED T. HODGSON.

Collingwood, Ont., 1903.
