"Pride of the Dairy."

PATENTED SEPT. 15TH, 1870,

BY THOMAS FORFAR, WATERDOWN.

THIS CHURN carried off First Prizes at Hamilton, Guelph and Milton, in 1871, competing against the Churn that took the First Prize at Kingston. It has an improved dash, and a cup on the staff to carry air into the ceam, and will produce butter much sooner and easier than the common Churn. Township Rights for this and the Second Prize Churn will be sold at Ten Dollars er Township, on application, or shipped to any R.R. Station in Ontario on receipt of \$4.50 each, until territory is sold; also the Right of the EMPIRE ROOT CUTTER, at Ten Dollars per township. It cuts 1½ bushels per minute.

Ditching & Grading Machine

WE, THE UNDERSIGNED, HAVING BEEN PRESENT AT A TRIAL AND carefully examined the workings of the Machine recently invented by Mr. Henry Carter for the purpose of making Open Ditches, Grading Roads and Subsoiling, consider the said Machine admirably adapted for performing all the operations claimed by the inventor, and we feel justified in recommending this Machine to the Municipal Officers of every city, town, village and township in the country, satisfied that a very great saving will be made to the public by using the said Invention for improving the highways of the country. The Machine is exceedingly simple in construction, substantially put tog ther, and not likely to get out of order. A man and heavy span of horses can handle it as realily as an ordinary plow. We also highly recommend this Invention to Farmers who contemplate Open Ditching, Road Grading and Subsoiling; also to Railroad Contractors for Grading and Ditching:—
