INCUBATION AND BOODING OF CHICKS

(Experimental Farms' Note).

Which is it to be, hens or incubators? If less than 100 chicks are to be hatched it is not generally considered advisable to buy an incubator, but if more than that number are

Refreshing and Healing Lettes—Murine for Redings Lettes—Murine for Redings of the Street Redings of the Street

wanted it is almost a necessity to have an incubator. If hens are used, select only birds that appear to be determined to set and are not clumsey or nervous on the nest. Do not allow hens in the same pen with set-ters. Be sure that your hen is per-fectly free from all vermin and see that she has a supply of fresh wa-ter and some whole grain every day. If artificial methods are used, a well ventilated cellar with a fairly

even temperature makes a suitable location for the incubator. Buy a well-made machine of a well tested make. Study the general directions sent with each machine and have it started several days before trusting the eggs to it.

The first essential of a good hatch whether under hens or in incubators is to have eggs from healthy, vig-orous breeding stock. The fresher the egg the better chance of a good hatch. Select only eggs of a normal size, discarding all rough, uneven, thin shells or any peculiar or abnormal shape. Do not allow the eggs to become chilled before being set. Give the hens or incubators a fair chance with good hatchable eggs and under most conditions they wil duce good healthy chicks.

successful in the brooding and rearing of chicks requires con stant care and attention to details If chicks are hatched by hens, let the hen remain quietly on the nest un-til the chicks get so lively that they

quality it is bleached to snowy whiteness and fine as muslin. In tropical Africa the inner bark of a leguminous tree is utilized in the same way. Indeed, it is surprising to learn how widely tree barks are employed as material for clothing the world over. And in the West Indies grows the "lace-bark tree," which grows a delicate tissue so like lace that many articles of feminine adornment are made from it.

Minard's Friend.

The Use of Nitro-Cultures

(Experimental Farm's Note).

In the report of the Dominion Bot-anist for the year ending March 31, 1915, he says:—"During the last month of the year,"—viz., December, 1914—"it was deemed advisable for this division to prepare nitro-cultures of alfalfa, red clover and peas for distribution to the branch farms."

Such was the genesis of the present system of free distribution of nitro-cultures to farmers, begun in the following season of 1916, and now entering the state of the season of the sea

tering its fifth year.

The branch farms, by their example and reports, and the ocular demonstration to visitors given in the condition of their leguminous crops started the demand of the farming public for these cultures, which it is our endeavor to stimulate, guide aright, and, to the best of our ca-

pacity, satisfy. For the benefit of those farmers

AND DESCRIPTION OF THE PARTY OF **Constipation Cure**

A druggist says: "For nearly thirty years I have commended the Extract of Roots, known as Mother Seige's Carathe Syrup, for the radical cure of constipation and indigestion. It is an old reliable remedy that never falls to do the work." 30 drops thrice daily. Get the Gasuina. to do the work." 30 thrice daily. Get the Ge at druggists. - CHARACTURE

who have not yet studied this question, we propose to briefly explain the term "nitro-culture."

Since the time of the Pomens it has been known that the introduction a crop rotation of a leagume—that is, one of the plants belonging to the family Leguinosae, of which the most important members from the farming view point are clovers, peas, beans, and vetches,—somewhat or other, greatly benefited other subsequent few years that the explanation has

een discovered.

The Legumes, as a family in the vegetable kingdom, generally bear on their rootlets small nodules or lumps, of the size of pin head upwards. Mic-roscopic study has shown that these nodules contain numerous small or-ganisms, known as bacteria. These ganisms, known as bacteria. These organisms belong to a particular group with a number of definite strains, each strain apparently confining itself strictly to a particular mining itself strictly to a particular plant or group of plants. A long series of subsequent experimenting has proved that these bacteris convert the nitrogen of the air into a chemical form which the plant or group of plants can readily assimilate. The association, in short, of plant and bacteria is decidedly beneficial both to the legumes and the soil. The both to the legumes and the soil. The net result, at the end of the season, is a valuable addition of nitrogen to

FARM CONDITIONS

Much Attention to Early Potato Planting.

The following is a summary of reports made by Agricultural Representatives to the Ontario Department of Agriculture:

The latter part of April was wet and cold, and the condition of vegetation was very backward for the opening of May, some Representatives putting progress of sowing as about two weeks later than usual. On Friday, however, work on the land had been generally resumed. Estimates of the acreages of spring grains in by the first of May range all the way from 15 to 60 per cent. by counties; a few individual farmers have finished, while others had almost nothing sown. Much attention is being given to early potato planting, a considerable acreage already having been put in,

in some cases before the land was really fit for the crop. There is a shortage of good seed in many locali-

Fall wheat and clover look well

Fall wheat and clover look well, speaking generally; but some representatives are of opinion that recent raw weather has given the former crop a slight setback.

Fodder is so scant with some that live stock is being thrust or the grass before there is a really satisfying bite for them. Grain especially is scarce. Concentrates are almost impossibly high in values. high in values.

st of the live stock are still be ing carried along on little better than a maintenance ration. Even some working horses are getting only a small share of grain with their fodder.

Fewer hogs are being fed, as a large number of brood sows were disposed of during the last six or eight months Prices now range from \$18 to \$21 a cwt. Little pigs vary in value, ranging from \$12 to \$22 a pair according to locality.

Natural Cloth.

In tropical South America the inner In tropical South America the inner bark of a species of tree yields an excellent cloth, the fibers of which are interwoven much as if the fabric came from a loom. All that is necessary is to wash and beat out the cellular stuff from the interstices and, when dried, to light flexible and altogether suitable for making up into garments.

Shoe Clerk—"What size would you like, madam?"
Customer—"I'd like a No. 2, but there's no use talking about that. Show me a No. 5." RESIGNED TO HER FEET.

THEM WIMMIN! "I wonder where my husb and can be!" said Mrs. Brown. "I have waited here for him since 6 o'clock."
"What time were you to meet him?" asked the friend.
"At 5 o'clock," replied Mrs. Brown.

ONE WOMAN'S **EXPERIENCE**

Of Interest to Childiess Women.

Toronto, Ontario.—"I suffered for a long time from a female weakness, inflammation, and a terrible backache caused by that condition. One day one of your booklets was left at my door, and I read how other women with troubles like mine had been made well, so I got a bottle of Lydia E. Pinkham's Vegetable Compound and a package of Sanative Wash, and it belped me wonderfully, and I now have the finest little baby boy that any mother could want. I want to and I now have the nnest little baby boy that any mother could want. I want to recommend Lydia E. Pinkham's Vegetable Compound to any woman who has female troubles."—Mrs. JOSEPH LA BELLA, 773 Shaw Street, Toronto, Ontario, Canada.

tario, Canada.

The experience of Motherhood is a trying one to most women and marks distinctly an epoch in their lives. Not one woman in a hundred is prepared or understands how to properly care for herself. Every woman at this time should rely upon Lydia E. Pinkham's Vegetable Compound, a most valuable tonio and invigorator of the female organism.

In many homes once childless there are now children because of the fact that Lydia E. Pinkham's Vegetable Compound makes women normal, healthy and strong, and this geod old fashioned root and herb remedy contuins ne narcoties or harmful drugs.

Squirrel No Weather Sign

Those who believe that the weather of a forthcoming season can be forecast with accuracy from observation of moss on trees, fur animals or the behavior of squirrels in their storing of nuts have faith in mytis and mere legends.

the behavior of squirrels in their storing of auts have faith in mytus and mere legends.

They are in the same category with those who attach significance to black cats, ladders, Fridays and the ominous symbol thirteen.

From the scientific standpoint, Alfred H. Thiessen, direct: of the Baltimore weather bureau, says there is nothing in it; that there is no method, fashion or way to make long-range forecasts; that compilers of almanacs hedge themselves about with general terms, which make it difficult to pin them down, but when they do predict a storm on a certain date more often than not they are wrong. The whole proof of the accuracy of any forecast is the number of times he hits the mark over a considerable period of time long enough to prevent the probability of chance or coincidence.

Mr. Thiessen declared that long study by the weather bureau has failed to disclose any natural law governing weather which would permit it being forecast in advance for even two or three months. He pointed out the year accounting symiticance such a

two or three months. He pointed out the vast economic significance such a

aw would have, how it would affect industry, agriculture and employment.
"The weather bureau," he went on,
"issues a weekly forecast of the
weather for certain sections, but it is not so accurate as the thirty-six or forty-eight hour forecasts. Take, for instance, the value a season forecast instance, the value a season forecast would have in manufacture. If we could say with a degree of certainty that the next winter would be very cold, overcoat manufacturers could speed up production retailers could buy an extra large stock of overcoats and sell more of them. If we could say that the following winter would say that the following winter would say that the following winter would be mild for certain areas, the overcoat makers could reduce production, the retailers would not order so many overcoats and waste would be elimin-

"Then in the farming certain crops require certain weather conditions favorable to them to make them grow abundantly. In the South cotton and corn are big crops. If we could say that the growing season for them would be wet or dry, the planter could plant man corn or more cotton, as he wished. Cotton requires dry weather wished. Cotton requires dry weather, while corn needs wet weather. It would saye the growers thousands of dollars if we had any method of telling what kind of moss on trees, birds of passage or moon phases. Animals or fowls do not know what kind of weather we are to have; they have no

intuition or instinct which would in-form them in advance. "Squireels store nuts according to the available supply and animals have a heavy or light coat of fur according to the past, not according to the coming weather.
"The making of long-range fore

casts by observations on animals is in the same class as making forecasts by observing a heavy coat and sweats

and sheds. Many people have their horses clipped in this change period so their animals will be more comfortable. This is one proof that an animals fur is governed by past weather, the fur having grown during the winter. The horse didn't have that heavy cost at the heginning. that heavy coat at the beginning.
"Many people have the belief that
the weather of a particular reason

furnishes a clue to the weather of the succeeding season; that is to say, a hot summer will be followed by a cold winter, believing that there is a law of compensation which invariably holds good, or that a warm year is followed by a cold year. This is not substantiated by observation."

Fair Exchange.

It was Mrs Malloon's birthday, and she felt a trifle disappointed that there was no gift beside her plate. It was the first time in twenty years that her husband had forgotten the ion. Mr. Malloon smiled at her frankly.
"My dear," he said, "I have be€n

so husy lately that I have not had time to buy you a birthday fift, but I'll give you the cow."
She thanked him graciously. "Daisy

sa beautiful cow," she said.

Two months later Mr. Malloon's birthday came round. When he appeared at breakfast his wife greeted him with a radiant smile. "My dear," she said, "I have been so busy lately sewing for the children hat I haven't had time to make you a highhaven't had time to make you a birthday gift, but I'll give you the cow."—Chicago News.

Lilies of the Field.

THE WALKER HOUSE

A PAINTERS' PARADISE.

Capri's Quaint Inn, Where Poor Artists Can Get Free Board

Capri, beautiful in itself, offers an irresistible invitation to artists, since it has an inn where any one, by painting a picture on the wall, can get free board.

To the lovely island of Capri, with its perennial summer, its blue grotto and its lemon groves, came some fifty years ago a ruined artist. He opened an inn and died rich. In his will, leav-ing the inn to his heirs, he made these

conditions:

"The charge per day, two bottles of red Capri wine included, is never to be more than 6 francs.

"If any artist is too poor to pay he

shall paint a picture upon some wall space, receiving all the accommodation accorded to those paying the

nignest price.
"If any German artist shall come to the inn he shall be accommodated and shall receive the amount of his fare to Germany upon his promising never

"eturn to Italy." The inn is conducted to-day on these conditions. Its walls are covered with paintings. Now and then a German artist gets his fare home.—Cincinnati

HOW'S YOUR BLOOD? **Pimples and Eruptions** Mean Bad Blood

People who have impure or impover-ished blood should be careful to take only a temperance remedy made of wild roots and barks, such as Doctor Pierce's Golden Medical Discovery is and has been for nearly 50 years. Ingredients printed on wrapper.

The first day you start to take this reliable medicine, impure germs and accumulations begin to separate in the blood and are then expelled through the eliminative organs.

In place of the impurities, the arteries and veins gradually get fresh vitalized blood and the action of this good blood on the skin means that pimples, boils, carbuncles, eczema, rash, acue and many skin blemishes will disappear. Then you must remember that when the blood is right, the liver, stomach, bowels and kidneys become healthy, active and vigorous and you will have no more trouble with indigestion, backache, headache.

Get Doctor Pierce's Golden Medical Discovery to-day at any medicine dealers, in tablet or liquid form, or send 10c' for trial package to Dr. Pierce's Invalids' Hotel, Buffalo, N. Y., or branch Laboratory, Bridgeburg, Ont.

BRAMPTON, ONT. - "A few years ago I was in a nervous and run-down condi-tion and felt greatly in need of a tonic. A friend who was being helped by Dr. Pierce's Golden Medical Discovery advised me to try it, too. It helped me from the very start and eventually restored me to perfect health. I feel in a position to praise the 'Golden Medical Discovery' very highly and take pleasure in recor mending it to all those who are at all weak or run - down." - MRS. ESTHER PEATSON.

chicks than she can keep comfort-ably warm. The artificial method requires a brooder so made that it will be possible to produce and hold heat enough to provide for the com-fort of the chicks in any weather, eas-ily and well ventilated. The chicks DR. WARD
