### MARVELS AT FIGURES ABSO

LIGHTNING CALCULATORS WHO WERE GIFTED BY NATURE.

Two Boys Whose Peculiar Talents Attracted General Attention-Some of the Difficult Tests Through Which They Passed Successfully.

George Parker Bidder was born in 1806 at Morton Hampstead, in Devon-shire, where his father carried on a small business as a stonemason. At the early age of four he showed a most ex-traordinary ability for calculation, which with slight assistance from an elder brother assumed quite phenom-Paragraphs have been extensively published in the daily papers dealing with the researches of M. Loisel of Paris on the recurrence of poisonous principles in eggs. It seems that the yolks of the eggs of hens, ducks and tortoises contain a poison which if injected into the animal body causes death from its effects on the nervous system. The white of the tortoise's egg also contains a toxic substance.

Why eggs are not poisonous as ordinarily used or even when eaten raw may be explained on the ground that the action of digestion alters the composition of the egg or at least modifies it so that ill effects are avoided. Indeed it is easy to show that certain foods at a particular stage of digestion are "poisons." It is the action of the liver on such foods which robs them of their power to do harm.

Rags are no proof of righteousness.

The following question was solved The following question was solved by him in forty seconds: Suppose the ball at the top of St. Paul's cathedral to be six feet in diameter, what did the gliding cost at 3½ pence per square inch? Answer, £237 10s 1d.

The following in one minute and twenty seconds: Suppose a city to be

twenty seconds: Suppose a city to be illuminated with 9,999 lamps, each lamp to consume one pint of oil every four hours in succession, how many gallons would they consume in forty years? Answer, 109,489,050 gallons. Another curious question was: Sup-pose the earth to consist of 917,000,000

inhabitants and suppose they die in thirty years and four months, how many have returned to dust since the time of Adam, computing it to be 5.850 years? Multiply the answer by 99.

years? Multiply the answer by 99.
During one of his exhibition tours, fortunately for the lad, his performances attracted the attention of eminent scholars, who, after making inquiries, subsequently undertook his education. He was attached to the ordnance survey for a short time and afterward was associated with Stephenson, the great engineer.

Some years after he entered Parliament, and numerous stories are extant of his wonderful skill in detecting a flaw in some elaborate sets of calculations, whereby he was often enabled to upset an opponent's case, or at other times he would establish his own case by arguments based upon mathematical data, possibly only at the moment ical data, possibly only at the moment-ical data, possibly only at the moment placed before him. It is said that on one occasion an opposing counsel ask-ed that he might not be allowed to re-main in the committee room on the ground that "nature had endowed him with gradition that the said and the said of the said wih qualities that did not place his

opponents on a fair footing."

After taking a leading part in many important engineering works he died at Dartmouth Sept. 20, 1878.

Another of these extraordinary chil-

Another of these extraordinary children, between whom and Bidder honors were almost equally divided, was Zereh Colburn, born at Cabot, Vt., Sept. 1, 1804. Signs of his wonderful power appeared at a very tender age. The discovery was accidentally made by his father, who was much surprised one day to hear him repeating the product of several numbers, although at the time he had received no other instruction than such as could be obtained at a small country school whose struction than such as could be ob-tained at a small country school whose curriculum did not include writing or ciphering. He thereupon proposed a variety of arithmetical questions to his son, all of which the child answered son, all of which the contract-with remarkable facility and correctness. At the age of eight the boy was able to solve most difficult questions by the mere operation of his mind.

Many persons of the first eminence for their leaves of the state of the st knowledge in mathematics made point of seeing and conversing with him, and they proposed to him a great variety of questions to test his mar-velous powers. Among them were the

following:
Give the square root of 999,999. Aft-Give the square root of 999,599. After hesitating a little he replied 999,999,000,001 and observed that he produced this result by multiplying the square of 37,037 by the square of 27. He was then asked to multiply the answer twice by 49 and once by 25, a task which he accomplished successfully, though the answer consists of seventeen figures.

teen figures.

Name the cube root of 413,993,348,677. To this he gave the correct an-577. To this he gave the correct answer in five seconds. How many times would a coach wheel twelve feet in circumference turn around in 256 miles, and how many minutes in forty-eight years? To the first he replied in two seconds 112,640, and to the second, before the question could be written down, 25,228,800. What are the factors of 247,483? To this he replied 941 and 263, which are the only factors.

Feed Dry Grain.

There is no benefit to be derived from wetting grain before it is fed. Feed it dry. The cow will masticate the food better and it will be better digested if it is eaten dry than if eaten wet. Adding water to the food in no way adds to the value of the food. The cow can help herself to what water she needs either before or after eating. Slopping cows is an old fashloned nction, and no good reason can be given for the practice.

Oddly Expressed.
In one of his letters William Brookfield tells how as school inspector he had to give an examination on physical science. "Whet was I to do?" nad to give an examination on physical science. "What was I to do? I knew nothing about hydrogen or oxygen or any other 'gen.' So I set them a paper which I called 'applied science.' One of my questions was, 'What would you do to cure a cold in the head?' A young lady answered, 'I should put my feet into hot water till you were in a profuse perspiration.'"

SYSTEM COMPULSORY.

The Creation of the System-The Metric Table-Some of Its Great Advantages Stated by Prof. Maclennan-A Boon to Our International Trade -A Very Important Question Fer All to Consider.

There is a strong probability that the Dominion Government will, within a year or two, introduce a bill making the metric system of measurement compulsory in Canada, says The Mail and Empire. The subject has been regarded as an academic one for, a long time, but a step to make it a practical issue was taken when Prof. Maclennan, of Toronto University, was recently appointed to travel about the country lecturing on the advantages of the system. Prof. Maclennan will visit several points in Ontario in the next few months, carrying the metric propaganda. After the college term he will ge to cities outside the province. The idea of the Government is to educate public opinion so that the future bill will arrive like a fairy godmother at an opportune moment, and satisfy a need that the Government is consequent. There is a strong probability that portune moment, and satisfy a need that the Government is now trying to make the people understand. Whatever may be the merits of the system, and whatever may be the state of public opinion a couple of years hence, there can be no doubt. there can be no doubt that at preser He was Absentminded.
The absentminded man is at it again. there is no sentiment at all on the sub-ject, either for or against a change. It will be Prof. Maclennan's business to stimulate and organize a feeling favor-able to the new system. He had been reading the egg story and decided to try the trick. The first thing

minutes? he asked himself, and, going to the stove with the egg in one hand and his watch in the other, he dropped the latter in the hot water. Then, placing the egg on the table, he sat down to read until the time was up. At the end of five or six minutes he was surprised to find the egg lying there before him, but, supposing that he had himself taken it from the kettle and cooled it, he proceeded to crack and peel it. The consequence may be imagined. Finally he missed his watch. The house was searched high and low, and it was not till the following morning that the cook found it in the kettle, where it had been holling for hours. The Creation of the System. wanting was James Watt the inventor of the steam engine, who suggested
the adoption of the Paris pound as the
unit of weight, and the length of the
seconds pendulum in Paris as the unit
of time. He proposed that all subdivisions and multiples of these standards should be decimally connected. As
a result of these and other representations, the Academy of Science, Paris,
devised a system, known as the metric
system. This was in 1789. Four years
later the system was adopted, and
ever since has been compulsory in
France. The basis of the metric system is the metre, roughly 40 inches,
exactly one ten-millionth part of the
length of a quadrant of the earth's
meridian. Water at a certain heat was
the basis of the tables of capacity and
weight.

weight. The Metric Table. The unit of weight is the gramme, of which 500 are, roughly speaking, equal to a pound. The unit of capacity is the litre, about equal to a quart. The following table is explanatory: Prefixes. L'th. W'ght. Capacity.

goes about curing you gently, mildly, correctly. You never know you are taking medicine—excect that you begin to get better and keep on getting better. Bu-Ju heals inflammation in the kidneys-takes away that sharp pain in the back and the dull ache through the hips—stops excessive urination—and enables the diseased portions of the kidneys to heal and strengthen. Milli- metre gramme litre Myria-

The litre is one cubic decimetre and the gramme is the weight of one cubic centimetre of water, at a temperature that produces greatest density. Here, then, is a relation among weight, capacity and length easy to remember, a vast improvement on our ounces and pluts and yards. Instead of acres, the metric system uses hectares and in metric system uses hectares, and in-stead of cords it has steres. Decimals a gramme replace ounces and grains The metric ton does not differ greatly from the ton we know, except that it

Some Great Advantages. Prof. Maclennan gives the following

complexion, hair and eyes of the in-tended wearer and the clothes likely 1. The metric system is orderly, clear and logical.

and logical.

There are no specific trade tables, such as avoirdupois, wine measure, grain measure, etc.

The single ratio of 10 is involved, thus making calculations extremely simple. Buttons are much used as a decora-tive medium. Many are put on in the

ly simple.

the medium. Many are put on in the form of a design.

As an illustration of the third point the professor gives the following problem: Reduce to millimetres 8 kilometres, 7 becometres, 8 decimetres, 8 metres, 6 decimetres, 9 metres, 6 decimetres,

the right place. Your lungs quickly neal and your cough disappears. For whooping-cough it's simply perfect.

Vapo-Cresolene is sold by drug rists, or sent express repeal on receipt of price. A Vapo-Cresolene is sold by drug rists, or sent express repeal on receipt of price. A Vapo-Cresolene is sold by drug rists, or sent express repeal on receipt of price. A Vapo-Cresolene occupied is repeal on receipt of price. A Vapo-Cresolene occupied is repeal on the receipt three countries have adopted the metric system; in fact, it is in use by all the clulized countries in the world but Great Britain, the United States and Russia. It would serve as a kind of mathematical Lingua Franca, understood by everybody. The disadvantages of the A Boon to International Trade. system, as pointed out in an article in Cassier's Magazine, do not appear for-

midable,

In Britain and Canada the system is now legalized, but not compulsory. In New Zealand ft will be adopted within the year, and at the colonial conference in 1902 a resolution was passed endorsing the metric system. A measure was passed through the House of Lords establishing it, but the sentiment of the House of Commons was hostile, and the bill was dropped. The Congress of the United States will probably deal with the subject at the present session.

# NOW PRACTICAL ISSUE Tired Doctoring

How many people in Canada are tired doctoring? How many have gone from one doctor to another searching for the health they cannot find? How many, disheartened and hopeless, are wondering to-day if all the sunshine and pleasure has gone out of life forever? They are the ones to whom Psychine is recommended by people who were once as they are but who to-day are healthy and happy. We can only mention a very few of the many here, but listen to what they say. It's the grandest news ever given to suffering men and women :-

MR. JAMES HERRELL, Springhill, N. S.—

"I was taken down with La Grippe, then Pneumonia and Typhoid Fever, which soon affected my lungs. I was under the care of several physicians, who regarded my case as hopeless. I found a cure in Psy-

MISS ELLA WOOD, Brownsville, Ont.

"I was so weak I could hardly drag myself across the floor. I could not sweep the carpet under any consideration. Many times I dropped utterly helpless from fatigue. I found a cure in Psychine."

MR. ALEX. MATHESON, Braemar, Ont.

"My physician advised me to go to another climate. He told me that my lungs were seriously affected, and that I could only live a short time. I found a cure in Psychine."

MISS ADA M. CHILDS, Florence, Ont.

"For many months my father had a very bad cough and rheumatism through his chest. He suffered great tortures, and had given up all hope of recovery. He found a cure in Psychine.'

MR. BRYCE ALLEN, Jarvis, Ont.

"I tried medicines, and doctors prescribed for me, but I got no relief. With lungs and stomach diseased, nervous, weak and wasted, I I began to use Psychine. With two months' treatment I found a cure

These people were tired doctoring, just as you are They thought life held nothing for them but pain and suffer ing and that terrible feeling of weakness and despondency They found new life in Psychine and what the great tonic and germ killer has done for them it will do foryou. It stops the ravages of disease and repairs the damage done. The greatest builder-up of weak men and women ever given to the public, the greatest of all spring medicines is
