Office of the Appleton
Knitting Machine Company,

Hamilton, June 1, 1872.

**THE APPLETON
KNITTING MACHINE COY,**

ARE now prepared to exhibit their invention to the public.

They claim for it a superiority over every other Knitting Machine.

It is perfect in its action, working smoothly and accurately, and will not get out of order.

It will knit close or open, plain or ribbed work. Knits in any shape, with single, double or triple thread,

WITH A PERFECT SELVAGE.

It will make a long, or short stitch, without stopping, and will knit backwards and forwards without tension on the yarn; in short, it has none of the defects of the other machines, and is an improvement on them all.

The standard of excellence of all knitted goods is that made by hand, therefore, it is required of a first-class Knitting Machine, that it produces Stockings, Socks, Shirts, Drawers, Mitts, Scarfs, and all other knitted goods, as perfect as the hand made article.

The Machine is constructed in the most substantial manner, finished in first-class style, and will last for years. It does perfect work, simple in construction, there is nothing about the machine but what may be understood at sight, and the most inexperienced may in a few hours acquire a knowledge of working it.

The Appleton Knitting Machine Company are prepared to submit their invention to any test or comparison with any other, and they desire no higher recommendation than that they feel assured will be accorded it by the Public.

A Book of Instruction is provided.
