

sequent upon its working, is liable at any time, owing to deficient rainfall, to prove unproductive, and yet we continue blind to the fact that by raising our eyes from any one of these scorched acres, we may see an unlimited supply of 6,000 cubic miles of water lying only just above us, awaiting the hand of someone to tap it.

The Company have it in view to supply this growing want, and having cut through the natural dam and brought the water to the brow of the escarpment, will under authority of their charter, distribute water throughout the fruit lands, thereby insuring to the grower his annual return for labor and enhancing the value of his lands from 200 to 300 per cent., as has been the case with the irrigated lands of California and Colorado and as also has been the case with those fortunate ones in this district, who either by use of windmills or otherwise have been enabled to use water for irrigating.
