How to Heat a House.

THE UNCOMMON SYSTEM.

... The ...

Safford Patent Radiators

Are the dominant force of the world's Heating Apparatus. They have replaced others. They have taken highest awards against the world's congregation of what is best.

The baton of command belongs to the inventor, Clarence "Safford."

The only Radiator in the world made in the same way as all Steamfitters' every day work—is the "Safford." All threaded joints, cannot crack. No bolts or packing used.
