- Intercolonial Railway of Canada -

THE ROYAL MAIL PASSENGER AND FREIGHT ROUTE BETWEEN

Canada and Great Britain,

and direct route between the west and all points on the Lower St. Lawrence and Paie de Chalcur. Also New Brunswick No a Scotia, Prince Edward Island, Cape Breton, Newfoundland, Bermuda, and Jamaica

New and elegant Pullman buffot sleeping and day cars run on through express trains

Superior elevator, warehouse, and dock accommodation at Halifax for shipment of Grain and General Merchandisc

Years of experience have proved the Intercalonial in connection with steamship lines to and from London, Liverpool and Glasgow, to Halifax, TO BE THE QUICKEST froight route between Canada and Great Britain.

Information as to passenger and freight rates can be had on application to R. B. MOODIE, Western Freight and Passenger Agent, 93 Rossin House Block, York St., Tovonto. GEO. W. ROBINSON, Eastern Freight and Passenger Agent, 136½ James St., Montreal.

A. BUSBY.

General Passenger Agent.

GEO. TAYLOR,

General Freight Agent.

D. POTTINGER.

Railway Office, Monoton, N.B., Feb. 1st, 1886.

Chief Sup rintendent.

AMERICAN

ELECTRIC MANUFACTURING CO.

EXECUTIVE OFFICES: Western Union Telegraph Co.'s Building, Cor. 23rd St. and 5th Ave.

This Company is now engaged in the manufacture of the most complete, economical and efficient system of Electric Arc Lighting ever invented, and will Contract to Construct and Install Complete Central Stations for lighting Cities and Towns under the well-known

AMERICAN SYSTEM OF ELECTRIC ARC LIGHTING.

Special Advantages of this System. Completeness, durability, steadiness, quality of light and economy of power. The Wood dynamo-electric generator occupies less space, is lighter, requires less motive-power, and coats less than others capable of producing an equal number of lights. There is no FIRING OR FLASHING OF THE COMMUTATOR, and consequently less loss of energy and wearing of the parts from this cause than is the case with other machines. It requires no ciling or other attention than to be kept clean, and its extreme simplicity enables it to be operated with the minimum of skill and attention. The current regulator and signalling apparatus, by which the machine is made to generate the exact current required for any number of lights from one to its full capacity—as they are turned off and on without change of speed or waste of power—is simple, effective, and safe. Its isope are reliable in operation, the colon-regulating mechanism being absolute in its coutrol, durable, and machined by changes of temperature or weather. They are of ermamental design, and the steadiness and purity of light produced are unequalled at the same expenditure of power.

Special Attention given to institute the same expenditure of power.

Special Attention given to inst. "my Isolated Plants for Mills, Factories, Shops, Railmad Buildings, and other Buildings where large spaces are to be illuminated.

Estimates Furnished for building Complete Central Lighting Stations of any capacity for Arc Lighting alone, or for ELECTRIC ARC LIGHTING, COMMINED WITH ESTABLISHED OR PROSPECTIVE GAS PLANTS.

A Combination Electric and Gas Plant is sensible and business-like. Some of the most successful and progressive thus Companies in the world are already adopting this plan with actisfaction to their customers and profit to timescives.

Descriptive Circulars Forwarded by Mail.
