HAMBLIN SMITH'S ALGEBRA.

With Appendix by ALFRED BAKER, B.A., Mathematical Tutor, University College, Toronto. 4th Ed., 90 cts.

Authorized by the Minister of Education for Ontario. Authorized by the Conneil of Public Instruction for Quebec. Recommended by the Senate of the University of Halifax.

C. MACDONALD, Prof. Mathematics, Dalhousie College, Halifax.

"I have received a set of your Mathematical Publications, viz., the Treatises on Arithmetic, Algebra, and Geometry, by Mr. Hamb-in Smith. They all seem to me admirable treatises, and fitted to I'n Smith. They all seem to me admirable treatises, and fitted to lethe text books for more thorough and scientific teaching than has yet found its way into the majority of our high schools and academies. Of the copious exercises in elementary algebraic, pro-cesses every thorough teacher will approve, since experience shews that, as discipline in grammar is the main requirement of the young student of classics, so practice in algebraic manipulations is the fundamental requirement of the algebraic. Then again, the reference of equations involving the treatment of radicals to a separate and advanced section, more than author as one who has sympathy with the difficulties of Leginners. The exercisions are separate and acvanced section, in this the author as one who has sympathy with the difficulties of beginners. The exvisitions are uniformly succinct and clear. The geometry has merits equally high. Mary of Euclid's methods are improved on, and propositions, not as in Luclid, deduced from a common principle. I may instance two propositions in the 3rd book, the 22nd, and the 31st. The method of superposition of triangles employed in the earlier propositions of the 6th book, will be to many a striking novelty, and it is uniform Of course, many of us, from long practice in axpounding and crit. of the 6th book, will be to many a striking novelty, and it is uniform Of conrse, many of us, from long practice in expounding and crit_i. cising Euclid's element, had arrived long ago at these method_s. But it may be doubted if they are generally known. They are unquestionably preferable to the old, though Euclid's method_s ought to be explained along with them. We want sadly a national Euclid, and this is the best approximation to it that I have seen. We in Dalhousie include these books as admissible and recom-mended text books in our mathematical classes of the first year. They are sure to come into extensive demand, as their merits come They are sure to come into extensive demand, as their merits come to be recognised.

R. C. WELDON, M.A., Math. Master Mc. Sackville, N. B. Allison College,

"We are using your Algebra in our Acadon, ...

A. C. A. DOANE, Inspector of Schools, Barrington, N. S.

"The algebra as an elementary work contains all that is needed for our better class of common schools. The arrangement is such as to lead the student from first principles gradually to the intri-cacies of the science, and then with lucid discussions to unravel those intricacies and bring the whole under the comprehension of every ordinary intellect. The examination papers form a valuable and useful part of the work. I can unhesitatingly recommend it to teachers as well adapted to aid them materially in their work, and to student: as a text book well suited to their needs.

C. T. ANDREWS, Inspector for Queen's Co., N. S.

"I have examined Hamblin Smith's algebra and found the examples admirably arranged in a progressive order, easy and well adapted for the use of cor public schools, into which I shall be pleased to recommend its troduction.

HERBERT C. CREED, M.A., Math. Master Normal Scotia, Fiedericton, N.B.

"I have made sufficient acquaintance with Hamblin Smith's algebra to be satisfied of its excellence as a text book, and to warrant me in recommending it to one of my classes.
