

spent in inspecting the stock which is always kept on hand. The prices are reasonable and the workmanship most excellent, therefore we predict that this firm must, in due course, be abundantly rewarded for the energy and skill displayed by them. In the repairing shop, no side department, we find dilapidated vehicles undergoing renovation and repairs, and in time these vehicles are turned out in a style that would defy recognition, while at the same time they are made sound, and will therefore do good service for considerable time to come.

### Engine & Boiler Makers.

#### ESDALE FOUNDRY.

The establishment bearing the above name was started under its present management in June, 1872, and now supplies a want formerly much felt by the mechanical and agricultural community, as this foundry turns out in good style engines and boilers, every description of ships' castings and farming implements which practical experience has proved to be best suited to the country. Therefore the patronage of shipbuilders, mechanics and farmers should be liberally extended to so useful an institution, which gives not only employment to a number of skilled workmen, but is a means of keeping in circulation, besides preventing a large amount of drainage of money from the country. The "Randall Harrow," as represented above, is a leading agricultural implement manufactured by this enterprising firm. See advertisement on page 511.
