VOL. 25.-NO. 36

Did Not Care Whether He Lived or Died.
Words of a Sunbury County Farmer.

Mr. Chas. F. True, of Lunenburg, N. B.
"I had Dyspepsia and Indigestion so bad for four years that I could scarcely stand after eating, my stomach hurt me so. Constipation prevented a movement of my bowels for four days at a time. I tried everything I heard of but without relief until induced to use one bottle of 'Goder's Syrup.' It worked like a charm, giving me immediate relief and finally cured me. I can eat anything, and feel as well as ever in my life. Have gained fifteen pounds in the last five months. It is the best medicine on the market for the complaint from which I suffered."
Feb. 2nd, 1894.
Druggists and General Dealers keep 'Goder's.' It cures chronic cases and all other ailments. 10¢ per bottle - 6 bottles \$5.00. Guaranteed.

WHOLE NO. 1,240

GENERAL NEWS.

The Massachusetts House of Representatives Tuesday afternoon defeated the Woman's Suffrage bill by a vote of 127 to 87.

The governor of Massachusetts now estimates the population of that State at 2,500,000, or more than 300 to the square mile.

Thursday a train will leave Memphis for Savannah, bearing many negroes en route to Liberia. By the time it reaches the Georgia coast it is thought, at least 500 negroes will be in the party.

A statement telegraphed from Pomona, Cal., that the hotels at St. Augustine, Fla., were ordering carloads of oranges from California is denied. A fruit farm ordered one carload as an experiment.

New Bedford, once maintained almost solely by its shipping interests, is now rivaling Lowell and Fall River as a manufacturing city, and is growing rapidly in population.

The town Council of Lexington, where the first battle of the Revolutionary War was fought, failed this year to make the usual appropriation for the celebration of the anniversary.

A bill has been drawn which will make it an offense to buy liquor as well as to sell it in New Hampshire. It will be introduced in the Legislature next week under auspices that promise well for its enactment.

The Ponce de Leon fresh water spring in the ocean off the coast of Florida has had a buoy placed beside it in order that it may more easily be found.

Crawfordsville, Ind., was to have a "Tribly tea," but the Rev. Dr. H. A. Tucker preached such a sermon against the character of Tribly, as given in the book that the tea was given up.

A tramp discovered a broken rail on the Nickel Plate near Argos and stopped an express train barely in time to avert a calamity. The company presented him with a check for \$50.

Neil Heath, B. A., committed suicide in a field near Victoria, B. C., Thursday. He was vice-principal of the Victoria High School, but was suspended for six months recently.

At the yachting exhibition in London, is shown a "combined ships buoy." It is carried on deck, and when the ships sink it floats and records at once the hour and minute of the disaster. It then automatically fires rockets, burns blue lights, shows a lamp and rings a bell.

The appeal of the English Traders' Association, directed towards preventing the London and Southwestern Railway Company from carrying American and Canadian products from Southampton to London at cheaper rates than are charged for the transportation of home products will be heard by the Royal Railway Commission in a few days.

Comptroller of Customs Wallace, at Ottawa, Canada, has decided that electricity comes under the head of unenumerated articles, and consequently bears a duty of 30 per cent. The question arose over a proposition to transmit power from the American side of Niagara Falls to surrounding Canadian cities.

Lady Florence Dixie is the president of that organization, "The British Ladies Football Club," which was founded last year by its present secretary and captain, Miss Nettie Honeyball.

The essentials for a cranberry bog are: facilities for covering the plants with water during the winter, and a supply of sand in which to set the plants. To secure the first a dam or dyke of sufficient height must be built, and having gates to control the flooding. The sand is usually available. Sand having a large percentage of silica, and is loamy sand, will not suffice. It is better to use a more retentive, and it facilitates the growth of weeds, one of the benefits derived from the use of sand.

The first operation after selecting a site, is to turn the soil over. If dry enough a plow will do the work and if not a spade will have to be used. It is important that this be done evenly. If uneven the water will not cover all parts alike and it will be hard to sand the plantation properly. Blueberry bushes should be removed. If allowed to remain, they will cause trouble afterward. When turned it should be covered very uniformly with the sand and the plants set out about eighteen inches apart. A great aid to the setting will be found in a rake like marker, having teeth about eight inches long, and the required distance apart. By running this both ways of the patch the point where the marks intersect will be found the spot for the plants. The cuttings are bunches of the runners taken from the old plants and are usually placed four or five together in a hill. If the sand is moist and the season exceptionally dry, but very few of the plants will fail to catch, and the following year will see the first fruit.

Before the freezing weather sets in, the water should be run over the plants. No injury will be done if they freeze in the water, unless a flood gets under the ice and causes it to tear the weaker plants out by the roots.

There are in our Provinces, acres of swampy land of considerable extent which yield no profit whatever to the owners, but which, with little labor and expense could be made the source of a considerable income, by growing the Bog or Cape Cod Cranberry. We have on the marshes bordering rivers emptying into the Bay of Fundy, a small speckled cranberry of the same nature as the Cape Cod, and their hardiness and good flavor are proof that something can be done here in the way of cultivating them.

At present we import them from the South in the winter, and from the New England States later, and the amount of money sent away for these delicious and popular berries is not inconsiderable.

To start a plantation necessitates quite an outlay and it is a certain failure if not managed properly. If we can produce them in any quantities the dividends will be large as once established the care of the patch is a very small item.
