Agriculture.

able to suppose that by a continued course Ashburton Treaty provides for delivering up of p'anting, the sizable and best shaped po felons on demand by either government." polatoes, we may keep up the species better than by cutting the seed or by planting the amail and refuse potatoes.

It is very certain that potatoes will not thrive so well when planted for a number of years on the same ground, as by shifting or improvements in machinery. Driven to rotation. There seems to be something pol- threadbare profits, the manufacturers seek sonous about the vines and the rootlets of po-ratoes that not only units the ground for a tion; and hence it has occurred that during succession of potatoe crops, but other crops tollowing are also affected. It is advisable

ted late, they will sometimes yield a larger. There are self acting toules now in use that quantity than when planted early, because will turn upwards of 2000 spindles! A miniquantity than when planted early, because will turn upwards of 2000 spindles! A mid-early ones are cometimes cut short by a dry of the present day with improved machinery, turn of weather at a critical time in their is capable of turning off a given quantity growth But as such dry times are more work at about one third less expense that it tkely to happen late than early in the season could have accomplished veven years since, you rint more risk by late planting. The in other words, a factory, which in 1838 re-Long Red, or Long John, seldom has to ri-quired an outlay of £600 per week for wages pen in the field; it is therefore better for the can now throw off the same quantity of work table after ripening for some months in the for £400 per week. We heard one respec-

should be planted as soon after as possible, best of her way to Canton he could make and not suffered to wilt. Rolling in plaster, the conton as fast as the ship, would

give a further trial misself of its reality; the earth 40 inches wide. Now, we would though I cannot conceive there is a doubt ask, if one manufacturer can do this what remaining on the subject. Last spring a could the whole machinery of England alone friend of mine, and myself were planting accomplish! Could it not make sufficient accomplish to the same time. I was planting to the many accomplish to the same time. I was planting to the many accomplish to the same time. I was planting accomplish. Could it not make sufficient cloth in a few years to cover the whole surface of the inhabited part of the globe?

Entraordinary Endurance of Fatigue—

Description of the subject. List spring a could the whole machinery or England alone accomplish. Could it not make sufficient cloth in a few years to cover the whole surface of the inhabited part of the globe?

Entraordinary Endurance of Fatigue—

Description of the subject. List spring a could the whole machinery or England alone accomplish. raising them, I cheerfully agreed to his endurance of fatigue; but what will be said proposition. He commenced by making of the following for the truth of which the holes in the earth, at the distance intended most important particulars we can work for the hills, that would hold about a peck; The parties to it are living, and the winner he then filled them with dry leached ashes, has the konour of appending F. R. S. to his labor and soil. But imagine my asionish- form a child's first lesson in writing.

It seems not yet to be fully settled whether it is proper to cut potatoes for planting. We sometimes have a good harvest when nothing but the eyes are planted, but we think we are not so sure of it. It is reason in the United States they are safe, as the late God."

Most assuredly if the individuals concerned in the theft, (for it can be a no other name) be caught and tientified on the Canada side, they will stand a fair chance of seeing the inside of our Provincial Penitentary. Even in the United States they are safe, as the late God."

Prom the Guardian.

The Fool hath said in his heart, there is no God."

Prom the Guardian.

No God! each muscle of our frame.

From the Poor Law Guide. EFFECT OF MANUFACTURING

PRESURES. Manufacturing pressures tend to ingrease, the last five or six years, there has been more improvement in machinery than had taken in all cases to avoid planting the same ground place for twenty five years before that period. If you wish your potators to ripen in the capability of the spinning male did not ex-ground you should plant early. When plan- ceed the power of turning 640 spindles. some eight or nine years since, the maximum cellar than when it is first dug. -Mass table manufacturer declare that it his forty Ploughnan. inch cotton was made last to a vessel at Linguisties are cut for seed the eves verpool and the vessel allowed to make the and not saffered to with. It strong in present as the samp, would said time, after cutting, has been hig by recommonded, both for promoting growth and keeping off worms.—New Eagland Fartury and keeping off worms.—New Eagland Fartury and the samp would said as the samp would consent to have nothing for it. Now, allowing the ordinary toy age of four months and calculating the number of miles the slap would said, it would not safe to said. require about twenty four millions of yards Culture of the Cacamber. —I will state a fact relative to the planting of cacambers, \$339 yards per hour, working the whole when came under my observation, and which time, night and day. The same machinery is worthy of being known. I shall at least would in some mooths, make a belt round

surface of the ground. Observing it, he journal of the show you how to miles in 1990 successive hours was considerable cocumbers. Never having much luck ed to be a wonderful instance of protracted to b

covering the ashes with a very small quantity name. 'I will bet any man £100," said one, of earth. The seed were then planted on a "that he cannot make 1,000,000 strokes with of earth. The seed were then planted of lavel with the surface of the ground. I was willing to see the experiment tried, but had no expectation of any thing but a loss of seed, see the experiment tried but a loss of seed, such as secretarily the seed were then planted of the surface of the ground. I was pen and ink within a month." These, be it observed, were not to be mere does or scratches, but fair down strokes, such as
