Steel Tooth Sulky Horse Rake

1st Prize, Provincial Fair, London, 1869!
1st Prize, Provincial Fair, Toronto, 1870!!!

Will do more work, easier, cleaner, and better than any other rake. It does not gather dust in the hay. Will rake over rougher ground. Is light and strong, well-made and nicely finished, the frame &c. being made of the best hickory. The teeth are fine spring steel, independent of each other, and will yield to pass obstructions without bending or breaking. Furnished with or without our Plaster Sower and Broadcast Seeder, Grass Seed Sower, and Hay Tedder—each machine being complete in itself, yet combined when desired. Farmers joining together and ordering four rakes will be furnished at a great reduction in price. For references, &c., send for our Descriptive Catalogue, containing nearly 100 illustrations of Implements, of which we have by far the largest variety in the Dominion.

McDOUGALL'S

PATENT

DISINFECTING POWDER.

IMPORTANT TO FARMERS

Preserves the Turnip Crop from the attack of the Fly.

Farmers are recommended to use the Disinfecting Powder to Prevent the Fly in their Turnip Crop. It is necessary that it should be applied before the Fly makes its appearance.

It is used in two ways for this purpose—
1.—The powder is mixed with the seed, and sown in the drills.
2.—The seed is first sown, and in three or four days afterwards the powder is sprinkled over the drills.
The same quantity, viz. 1 cwt. of powder per acre being used in both cases, either of these ways answers the purpose; the latter is generally preferred.

SHEWBRIDGE HILL, NANTWICH, CHEESHIRE.

Mr. McDougall,
Sir—Send me a ton of your Disinfecting Powder without delay. It effectually saved my Turnip Crop last year from the fly, &c. I am going to use it again both here and in Lancashire. Send me two tons up to 35 Mosley Street, early to-morrow, (Tuesday).
Yours, &c.,
W. H. HORNBY, M.P. for Blackburn.

May 20th, 1860.

BEECH COTTAGE, WREXHAM, June 29, 1860.

DEAR SIR,—As I consider the use of your Disinfecting Powder so very valuable for the prevention of loss by the fly, black Jack, or caterpillar, I give you the result of my experience last year.

I used 1 cwt. of the powder (mixed with your super-phosphate) per acre, and did not lose any plants, whereas in my neighbours' adjoining fields (where the powder was not used) patches of more than half acres were completely destroyed. From this result I need hardly say I have not this year sown a turnip without using the powder, and all are now up and clear of the fly.

I consider the best mode of applying, is to sow it at the same time as the seed with the drill. It answers very well also sown broadcast just before the seed bursts through the soil, but this plan requires more powder per acre. I think it is also beneficial as a manure, having last year had a very good crop of Swedes sown with 5 cwt. of your super-phosphate and 1 cwt. of the powder per acre.
Yours truly,
GEO. T. ATHERTON.

NEW HALL, BY NESTON, June 1, 1858.

DEAR SIR,—I will thank you to forward me to Spittal Station three bags of McDougall's powder.

The fly is threatening entire destruction to the turnip crop; but I find that by going along the drills and slightly dusting the young plants, a complete stoppage is put to the destructive operations of this pest of the farm.

Dear Sir, yours faithfully,

Mr. J. Banks, Liverpool. HENRY MOWBRAY,

SHEEP DIPPING.

McDOUGALL'S

PATENT NON-POISONOUS

Sheep & Lamb Dipping Composition

Is now used more extensively at home and abroad than any other dressing, and by the leading flockmasters in preference to all others.

The Compositions generally used for Sheep Dipping contain Mineral Poisons and strong Alkalis, the Arsenic and Mercury they contain are a continual source of danger both to the animals and the persons who apply the Poisonous Compositions; ruinous losses are incurred when the Sheep do not happen to be in a condition to resist the action of the Poison, or the operator is not sufficiently skilful in taking the needful precaution, fatal accidents frequently happen, and in some cases hundreds of valuable Sheep have died within a few days after being dipped in these Poisonous Baths. The strong Alkali, by which the Arsenic is rendered soluble, is also a very objectionable application, it combines with and destroys the oleaginous covering or "yolk," as it is called, with which nature has furnished the Wool, thus at once injuring the Fleece and lowering the health of the Sheep.

The Composition now offered is free from these objections, and possesses the following advantages—

1. It can be used without the slightest danger on Sheep and Lambs of any age. It will not injure the skin or garments of the persons applying it.
2. It effectually destroys Ticks, Lice, and other Vermin, and enables the Sheep to feed with comfort.
3. It cleans and improves the appearance of the fleece, increases the oily covering of the Wool, and owing to its stimulating effects, produces a larger quantity superior in staple.
4. It possesses remarkable healing and antiseptic properties, rapidly cures Shear Wounds and Sores, and prevents contagion from skin diseases.
5. It is soluble in water, and easy of application.
6. It is the best cure for SCAB and the ravages of the MAGGOT FLY.

SCAB IN SHEEP.

Dipping the sheep as above is the best protection from this contagious disease. An effectual and speedy cure may be effected in the worst cases by using the Dipping Composition as an ointment.

At Home and on the large sheep runs of Australia and South Africa, it has proved to be the most efficient dressing for this purpose.

FOOT ROT IN SHEEP.

The best and safest cure for Foot rot in Sheep and Lambs is McDougall's Foot Rot Ointment, free from Strong Acids and burning Caustics.

FOR HORSES AND CATTLE.

The Dipping Composition is invaluable as a wash to destroy Lice. For Sores and Wounds it is very useful as a salve; it allays irritation, has great healing powers, and protects the sore from Flies and Insects. It is admirably adapted to protect Horses and Cattle from flies whilst at pasture.

Directions for use accompanies each package.
Send to the undersigned for copy of the "Farmers' Gazette and Sanitary Times, (mailed free) containing testimonials of the efficacy of this and other preparations used by Farmers, with a great deal of other valuable information.
