

PARKE, DAVIS & CO.'S

Anti-diphtheritic Serum

[ANTITOXIN]

Our Serum is absolutely sterile, and is put up in hermetically sealed glass bulbs. It is strictly fresh when it leaves the Laboratory, as we only keep a small quantity in stock, for we believe it is better to keep the horses well immunized, and draw from them as occasion demands.

Only young and carefully examined horses are used for producing the antitoxin. And we have never yet had reported a case of sudden death following the use of our Serum.

Our Serum has been officially examined and approved by the following State Boards of Health: Michigan, Massachusetts, Pennsylvania, California, and by the Ontario Board of Health, also by other important Boards of Health in the United States and Canada.

FOUR GRADES OF STRENGTH:

- No. 0. A serum of 250 units, for immunizing. White label.
- No. 1. A serum of 500 units, for mild cases. Blue label.
- No. 2. A serum of 1000 units, for average cases. Yellow label.
- No. 3. A serum of 1500 units, for severe cases. Green label.

Special Note.

The serums we are now producing are from three to five times as strong as could be had a year ago, and we expect to still further increase their strength. For this reason we list the serums according to the number of units and not according to bulk. The quantity to be injected is now only from 1 to 5 Cc.

We also supply serums for tetanus, tuberculosis, and streptococcus diseases, as well as Coley's Mixture and the toxins of erysipelas and prodigiosus. We prepare different culture media, microscopic slides of disease germs, etc., a description of which will be furnished upon application.

Correspondence respectfully solicited.
Literature mailed upon request.
