30 Th.	♈	50	05	7 50	7 26	54	01	52	04	Showers.

PLANETS IN APRIL.—Jupiter, Saturn, Uranus and Mercury are "Evening Stars" during the month. Mars and Venus are "Morning Stars," but too close to the Sun for observation. Mercury is very favorably placed for notice in the sky after sunset, for a few days before and after the 7th, on which date he reaches his greatest elongation of 19° 17' E. The old Moon is near Mars and Venus on the mornings of the 13th and 14th. The New Moon passes Saturn's place on the 18th in the evening, and overtakes Jupiter on the 23rd. Mercury passes between the Earth and Sun (inferior conjunction) on the 27th, and is in conjunction with Venus on the following day.
