

THAT PILE OF OLD COMBS

THE Honey Season over, and the bees snugly packed away for the Winter, the Bee-keeper will be able to turn his attention to the accumulation of old and broken combs in the honey house and other places. To the careful Apiarist this accumulation represents so much extra cash over and above his honey crop, and will be treated accordingly. He uses a Wax Press, of course—the latest and best.

The old systems of boiling and steaming did not extract much more than half the wax the comb contained, the steam press was better but still there was sufficient left in the refuse to make it excellent but expensive fire kindling. The latest and best is that of pressing under water, which separates and washes out the wax, practically removing every particle of the valuable.

The **Sibbald Wax Press**, invented by Mr. H. G. Sibbald, ex-President of the O.B.K.A., embodies this principle of pressing under water. It is a strong machine with a powerful screw, and nothing about it easily broken or apt to get out of order, and the price within the reach of all—

\$7.50
