**The Wheat Outlook.**  
NO DANGER OF WORLD SHORTAGE  
There is no danger of a world shortage of wheat during the coming year, and there is at present no indication of an undue surplus, according to the October issue of Commerce Monthly, published by the National Bank of Commerce in New York. World wheat production and requirements are approximately in balance.

"Estimated 1921 production of wheat in twenty countries which before the war produced 68 per cent of the known wheat crop of the world, aggregates 2,490,600,000 bushels as compared with 2,384,145,000 bushels produced last year," Commerce Monthly says. The 1921 crop of the United States is estimated at 754,000,000 bushels and of Canada at 254,386,000 bushels. Allowing 600,000,000 bushels in the United States and 90,000,000 bushels in Canada for consumption and seeding requirements, and assuming a normal carryover at the beginning and end of the wheat year, there would be available for export from the two countries before July 1, 1922 a little over 350,000,000 bushels. All hope of surplus wheat supplies from Russia has been abandoned and famine relief in that country may make an appreciable drain on international supplies. Crops in northern Africa are fairly good, following a very poor harvest last year, but a normal exportable surplus is not expected. Exports from India are reported to have been prohibited entirely, because of the poor crop and high prices, and no improvement can be expected before the 1922 harvest. Argentina and Australia still have a fairly large share of their last crops. The amount available for export from Argentina on July 1 is estimated at over 40,000,000 bushels and from Australia at about 50,000,000 bushels, allowing for a normal carryover in each country. Current stocks in Europe are not large but are distinctly better than last year and are sufficient to meet requirements until the new harvest is available. Normally western Europe imports an average of 400,000,000 bushels of wheat annually. Of this amount Russia formerly supplied 150,000,000 bushels. In the last crop year, ending July 1, 1921, Canada and the United States together furnished net exports of about 475,000,000 bushels, of which the greater part was sent to Europe. The estimated exportable surplus of 350,000,000 bushels from the United States and Canada, together with the 90,000,000 bushel carryover in Argentina and Australia, therefore, make a total of 440,000,000 bushels available to meet the international demand. This apparently balances the probable European requirements of approximately 400,000,000 bushels, with a reasonable allowance for Russian requirements.

**Fur Production in Canada.**  
More than three and a half million pelts, worth \$21,387,000, were produced in Canada in 1920, according to an article in the October number of Commerce Monthly, issued by the National Bank of Commerce in New York. Muskrat and beaver pelts valued at \$4,000,000 and \$5,200,000 respectively comprised about half the total, with marten, mink, silver fox and fisher following in the order named. The article continues:

A very small proportion of these pelts was produced by the fur farming industry, which confines itself almost entirely to silver fox. The fox has proved most suited to domestication and has been successfully raised for the past 40 years. In 1919 there were 424 fox farms, 3 mink farms and 2 raccoon farms in operation with a total production of 2,543 pelts worth \$508,849. On the farms at the end of the year there were 8,810 foxes, mostly of the silver variety, valued at approximately \$3,960,000. The largest part of the Canadian fur production is exported, principally to the United States. In the fiscal year 1921, imports from Canada totalled 2,834,000 pelts, worth \$9,093,000.

**Patriotic Frenchman.**  
Refused Invention to Prussians.  
PARIS. (Associated Press)—A controversy as to who first invented machine guns is one of the war's after-mathes in France. Lyons puts forth the claim of Mr. du Perron, who in 1775, is said to have submitted to the young King Louis XVI a military "orgue" which worked on a crank system, and could fire 24 bullets "almost simultaneously, and consequently could annihilate a whole regiment in a few minutes," according to a contemporary record. The new weapon appeared to be so murderous that the King and his ministers rejected it, and its inventor was held up as an enemy of humanity. The powers hostile to France tried to secure the invention, but du Perron refused for patriotic motives and he died in poverty.

**Fashions and Fads.**  
Grey gabardine and broadcloth are trimmed with grey fur.  
Elaborate belts in beads are worn with simple chemise dresses.  
Belts of fringed leather are seen on dresses of crepe or tricot.

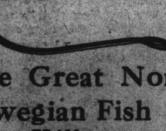

**German Republican Flag Not Acceptable to People.**  
Black, White and Red Banner the Most Popular.  
BERLIN. (Associated Press)—The black, red and gold flag of the German republic is less in evidence than any other of the dozen or more official emblems which wave from houses of every town and city of the country. The most popular banner is the black, white and red of the former empire. In some provinces and in a number of towns the republican flag has never been flown, is not recognized, and cannot be purchased. Even in Berlin, seat of the government, the flying standards of the empire outnumber those of the republic, which appear generally to be restricted to necessary official use or to popular demonstrations in favor of the new regime. The red flag of the Communists usually flies side by side with the republican colors during any popular parades or manifestations.

**Nottingham Goose Fair.**  
Nottingham Goose Fair, held on October 2, is a festival known far and wide, and is launched on its career as a fifteen days' carnival. In a Charter of 1284 it says—"Wherefore we will and firmly do join for ourselves and our heirs, that the aforesaid burgesses and men and their successors, beside their fair lasting eight days at the Feast of St. Matthew the Apostle, shall have for ever one other fair in the same town every year, to endure for fifteen days, to wit, on the eve, the day, and the morrow of the Feast of St. Edmund the King and Martyr, and for the twelve days following." Goose Fair in those spacious times was then a serious market as well as a holiday. In 1766, a riot started in the cheese section because the dairymen asked 28s. to 30s. per hundredweight for their produce—to the just indignation of the citizens, who broke out in tumultuous riot. The Mayor, in his attempt to restore peace, was felled to the ground by a cheese, in the Market Place, and the 16th Light Dragoons had to be called upon to restore order. Now there is no pretence of business at Goose Fair—it is simply a carnival of amusement, and the Market Square is filled with shows, roundabouts, etc. The din is indescribable; the pandemonium appalling! For three whole days the Market Place was given up to jostling, pushing, shouting throngs. There was plenty of horse play and "mafficking"; but the merry makers enjoyed it.

**Boy and Girl Plan Murder.**  
Michael Moran, 15 years old, held at Monmouth, Mich., with his sister Frances, aged 12, on a charge of attempting to murder Matt Plohar, several days ago, has confessed that he and his sister plotted to kill Plohar so they might get money they had been told he had hoarded. Plohar is a bachelor, and is supposed to have had quite a sum of money. He was shot from ambush by young Moran as he was crossing the field near his property, having been lured from his home by the boy's sister, who asked him to help her father drag a deer from the woods. He will recover.

FYORREKA AGAIN.  
Fyorrhea is so insidious that we want to repeat again and again our former warnings against it. It is not painful as a rule, and that very fact makes it all the more dangerous. Watch for those bleeding gums, they are your warnings. Do not give your body a chance to absorb poisons that come from bad teeth or diseased gums. Anything from a headache to a serious illness may result from your neglect. Fyorrhea is a dreadful disease.

**Fat Folks to Be Taxed.**  
HUMORISTS SEE WAY TO INCREASE REVENUE.  
BERLIN. (Associated Press)—The Government's search for new sources of revenue to meet increasing expenditures has brought a group of humorists to the rescue, one branch of which, submitting a statute already prepared, suggests a tax on fat folks whose waist-line circumference exceeds the chest measurement. Another suggests attention be paid to double chins and "whisky noses." The proponents of the fat tax include the following provisions in the statute they have submitted:

"Males between the ages of 15 and 30 whose waist exceeds the chest circumference shall pay 1,000 marks yearly for each excess centimeter, between 30 and 40 years, 500 marks."

**SCHOONERS COasting.**—The tug Hugh D. left port this morning to tow in two Danish schooners due here to load fish for market. They arrived in port at 1:15 p.m.

**Postal Deputation Appointed.**  
The regular monthly meeting of the Postal Association held last night was largely attended. After the transaction of regular routine business, the matter of the Government's recently presented to the Government regarding the wage reduction, was discussed. A deputation was appointed to meet the Prime Minister tomorrow when it is hoped that a definite reply will be received.

**The Weapon Frightful.**  
When in their great offensive the Germans put in action a gun which hurled a tremendous projectile nearly eight miles, actually bombarding Paris from that distance, the world was almost startled from its propriety and thought that the last word in missile propulsion had been spoken. Quite recently, however, Mr. Robert Temple, of New York, has invented a missile driver which makes the Germans' "Big Berthas" quite tame affairs. The sample gun constructed by the inventor is but a small weapon, but its astonishing performances show clearly what could be done with a similar weapon made to cannon size and calibre. In its present form, says the "Popular Science Monthly," it is a hand instrument and used thus far only for training. It is noiseless and tickless despite its terrific power. Its maximum shell velocity will be five miles a second. The little model construction will drive a bullet half its length into a three quarter inch steel plate placed against the muzzle of the gun, with no shock or danger to the gunner or spectators. The principle of this terrible weapon is being held secret for United States military use. At the present time from fifty to seventy-five per cent of the explosive force of high powered rifles is dissipated in the form of heat and sound. A big gun on a battleship belches forth a twenty foot tongue of flame when it is fired. All this tremendous energy is used against the projectile in the Temple gun, nothing being wasted of the gun charge, not even the roar; every particle of the explosive being burned before the projectile starts to move. There is no recoil and no noise. The muzzle of the small gun is placed against a three-quarter inch steel plate, the trigger is pulled, there is no kick, and the only sound is the sharp click of the steel bullet against the plate. The penetration of the bullet may be regulated by the size of the charge, and the range of velocities is from one to five miles a second. Scientists who have experimented with the invention claim that it would be possible to construct a large gun of this type capable of hurling a five-ton projectile upwards of 300 miles. One shudder to think of war where such weapons are used—Acadian Recorder.

**Rescue Wounded in Train Wreck.**  
LYONS, FRANCE. (Associated Press).—Handcuffed in pairs and in charge of four gendarmes, 12 French military prisoners en route for Algeria, to serve sentences ranging from five to 15 years, were aboard the Strasbourg-Marseilles express when it jumped the track at Les Echets a few miles from here. Forty passengers were killed and 70 injured. None of the prisoners was seriously hurt, but three gendarmes were killed, and the other pinned under the wreckage, lay seriously wounded. All semblance of authority and order had disappeared. The prisoners were free but, instead of running away, they pulled the wounded gendarmes out of the tangled mass of wood and iron, and laid him on the grass. During the night they rescued 31 injured passengers. Then they gave themselves up. They have since left for Algeria to serve their sentences, but it is understood that the Minister of War is studying the case, and the opinion is expressed that, in due course of red-tape, they will be pardoned.
