

is a cure for spotting, but the results in my case are somewhat suggestive.

Has anybody else anything to say on the matter which will give light and be of practical service in growing tomatoes.

RICHARD BAIGENT.

THE JEFFERSON GRAPE.

Charles Downing says:—This new, handsome and excellent grape is a cross of the Concord and Iona; it is healthy, very vigorous; wood rather short-jointed; leaves large, thick and downy; very productive; bunch large, shouldered, often double shouldered; compact, berry medium to large, roundish oval; skin rather thick, light red, with a thin, lilac bloom; flesh melting, yet tender, juicy, sweet, slightly vinous, aromatic and rich; the berries adhere strongly to the pannicle, and the fruit maintains its freshness for a long time after being gathered. It is of fine quality, and very promising either for market or home use. It ripens about the time of Concord.

J. J. H. Gregory says:—A rare good grape, the Jefferson. Among the score or more of new grapes before the public, this seedling of Mr. Ricketts stands out so exceptionally good that I have purchased several for my own grounds, and can recommend it to my patrons.

The judges at the Lynchburg, Va., Agricultural Fair in 1880, say:—The Jefferson was one of the very best on exhibition, and for fine eating qualities could not be excelled.

The Editor of the *American Wine and Grape Grower* says:—The Jefferson is one of our best red grapes for table, fully equal to Iona, and more vigorous and very productive, often giving branches weighing one pound or more.

THE CRESCENT SEEDLING STRAWBERRY.

This is beyond question a wonderful strawberry; its productiveness is astonishing. In size it is medium to large; in color, brilliant scarlet, and does not get dull when in market; in quality, rich, having the peculiar wild flavor. The fruit colors on all sides at once, so that all red berries may be gathered, a quality appreciated by market growers; all berries perfect in form and merchantable. It bears immense crops even in weeds and grass. It is the "iron clad" of the new sorts.

The above is what A. M. Purdy says of this new strawberry, and he has every opportunity for forming a correct opinion.

A correspondent of the *Fruit Recorder*, who resides at Burlington, in the State of Vermont, says of it:

"I fruited some Crescents this year, they are simply immense. Although I had many kinds, none equalled the Crescent. I let them all run together on very rich, moist land (a loam), and they produced more large berries than I ever saw on the same amount of land. I did not get any of the very large berries that some of my neighbors did from the Sharpless. I do not care for a few very large berries, but my Crescents were all large; I might almost say very large—except for some of those rare specimens that are now being produced, they were certainly as large as are required for the table or market, and the quantity was astonishing, and the quality very fine."

J. A. Benedict, in *Chautauqua Farmer*, says:

"In regard to strawberries, I find the Crescent Seedling ahead of anything I have ever grown. Its yield is from a quarter to a third better than the Wilson. Have the Sharpless, but shall
