

a slender point in front, behind is a transverse area pointed in front, and in front are two dark spots connected to the posterior area by a reddish line. Taken from graves, Washington, D. C. (Dr. Motter.)

*Nesticus cavicola*, n. sp.

Length ♂, 1.5 mm. Wholly pale whitish, clothed with long bristly hairs. Cephalothorax rather short and broad; six eyes, sub-equal in size, A. M. E. not visible; posterior row nearly straight, the P. M. E. farther apart than from the P. S. E.; S. E. touching; sternum broad, sides rounded; legs long, all femora longer than the cephalothorax, hairs on legs longer than the diameter of the joints; abdomen pointed behind, one and a half times longer than broad. Femur of male palpus rather long, palpal organ large, a projection of tibia broadest near tip and bifid, one branch is cleft; the style is long, curved around tip of bulb, from the tip of bulb there projects outward a pointed spine, and below is another projection tipped with a short black hook. From a cave, Chiricahua Mts. (Wood Canon), Ariz., June, 1897. (H. E. Hubbard.)

*Erigone albescentis*, n. sp.

Length ♀, 1.8 mm. Cephalothorax, legs, mandibles, and sternum uniform yellowish, abdomen uniform whitish gray; eyes on black spots. Head rather elevated; posterior eye-row procurved, the P. M. E. about as far from each other as from the equal P. S. E.; A. M. E. small, and close together. Mandibles of moderate size, vertical, armed along their lower front margin with several teeth, and behind with a row of denticles, sternum broad, sides rounded, blunt pointed behind; legs of moderate length, with many hairs and a few spines, one above on tibia IV.; abdomen oviform, clothed with scattered stiff hairs, which arise from minute yellowish dots; epigynum shows two curved dark lines approaching each other from behind, and a darkish spot outwards from their tips. From the inside of coffins in graves opened during the transfer of a cemetery, Washington, D. C. (Dr. Motter.)

*Philodromus pacificus*, n. sp.

Length ♀, 4.1 mm. Cephalothorax yellowish, darkest on the sides, which are densely mottled and lineate with red-brown, a white v mark on the middle with its apex near the dorsal groove, dorsum of abdomen white, showing two basal pairs of yellowish muscular spots, sides of abdomen broadly suffused with red-brown from base to tip, venter whitish; femora, patellæ, and tibiæ pale reddish brown above, lighter below, distal joints yellowish. Sternum light yellowish, the body is full,
