

Genitalia: ultimate ventral segment of the female three times the length of the penultimate, angularly excavated from the acute lateral angles half way to the base in the middle, from which arises a strap-like tooth, nearly equalling the lateral angles, its apex rounded; male valve not as long as the ultimate segment, very obtusely triangular, plates broad at base, triangularly narrowing to one-third their original width, then extending as acutely tapering up-turned points.

Described from numerous specimens taken at Pueblo, Colo.

*Eutettix stricta*, n. sp.—Form of *insana*, but narrower, pale yellow, with a golden reflection, especially in the males. Length, ♀ 4 mm., ♂ 3.5 mm.

Vertex nearly parallel margined, almost twice wider than long, as wide as the pronotum is long, the surface slightly depressed, bluntly rounding to the front, face as in *insana*; elytra rather long, narrowing behind, veins on clavus not united.

Colour: vertex orange or greenish yellow, sometimes a pair of spots behind the apex, face lemon yellow, front with about seven short brown arcs, the upper pair very oblique; pronotum olive or yellowish; scutellum orange, a pair of brown spots on the disc; elytra greenish or golden subhyaline; below lemon yellow, rostrum orange.

Genitalia: ultimate ventral segment of the female two and one-half times the length of the penultimate, the lateral margins narrowing posteriorly, posterior margin truncate, with a broad just noticeable median projection; ovipositor rather long, orange; pygofers narrow, greenish; male valve very short and broad, about half the length of the ultimate segment, plates very broad at base, long triangular, with the acute apices produced and coloured bright orange.

Described from numerous examples collected in Ariz. by Dr. Kunze.

*Deltocephalus grammicus*, n. sp.—Form of *albidus* nearly, but longer and narrower. Lemon yellow, with six brown stripes on pronotum and elytra. Length 5.25 mm.; width 1.25 mm.

Vertex flat, roundly right angled, a fifth longer than its basal width, over half longer on its middle than against the eye, a fifth longer than the pronotum; face making an acute angle with the vertex, front very narrow, resembling a *Platymetopius*; elytra long, flaring, venation similar to that of *imputans*, obscured by the colour lines, veins on clavus coalescing for one-third their length.
