

form of skin disease may be simulated by syphilis. By the aid of these diagrams men who are kept away from large clinics can really fortify themselves in their diagnosis. These two volumes embrace such a wide scope of illustrative skin diseases that practitioners who meet with skin diseases at all frequently cannot afford to be without it as an atlas of reference. The moderate price at which it is placed before the profession places it within the reach of all. The typography and binding are all that one could wish for.

A Text-Book of Legal Medicine and Toxicology. Edited by FREDERICK PETERSON, M.D., Chief of Clinic, Nervous Department of the College of Physicians and Surgeons, New York; and WALTER S. HAINES, M.D., Professor of Chemistry, Pharmacy and Toxicology, Rush Medical College, in affiliation with the University of Chicago. Two imperial octavo volumes of about 750 pages each, fully illustrated. Philadelphia, New York, London: W. B. Saunders & Company, 1903. Per volume, cloth, \$5.00, net; sheep or half morocco, \$6.00, net. Canadian agents: J. A. Carveth & Co., Limited, 413 Parliament Street, Toronto.

This work presents to the medical and legal professions a comprehensive survey of forensic medicine and toxicology in moderate compass.

For convenience of reference the treatise has been divided into two sections, Part I and Part II, the latter being devoted to toxicology and all other portions of legal medicine in which laboratory investigation is an essential feature. Under "Expert Evidence" not only is advice given to medical experts, but suggestions are also made to attorneys as to the best methods of obtaining the desired information from the witness. The Bertillon and Greenleaf-Smart systems of identification are concisely and intelligently described, and the advantages of each stated. *An interesting and important chapter is that on "The Destruction and Attempted Destruction of the Human Body by Fire and Chemicals;"* for on the determination of the human or animal source of the remains frequently depends the legal conduct of a given case, and the guilt or innocence of the accused. A chapter not usually found in works on Legal Medicine, though of far more than passing significance to both the medical expert and the attorney, is that on the medicolegal relations of the X-Rays. The responsibility of pharmacists in the compounding of prescriptions, in the selling of poisons, in substituting drugs other than those prescribed, etc., furnishes a chapter of the greatest interest to everyone concerned with questions of medical jurisprudence. Also included in the work is the enumeration of the laws of the various States relating to the commitment and retention of the insane. In fact, the entire work is overflowing with matters of the utmost importance, and expresses clearly, concisely and accurately the very latest opinions on all branches of forensic medicine and toxicology.
